Notes and Queries.

HINTS TO CORRESPONDENTS.

Names and Address must accompany all letters or no attention will be paid thereto. This is for our information and not for publication. References to former articles or answers should give date of paper and page or number of question. Inquiries not answered in reasonable time should be repeated; correspondents will bear in mind that some answers require not a little research, and, though we endeavor to reply to all either by letter or in this department, each must take his turn. Buyers wishing to purchase any article not advertised in our columns will be furnished with addresses of houses manufacturing or carrying the same. Special Written Information on matters of personal rather than general interest cannot be expected without remuneration. Scientific American Supplements referred to may be had at the office. Price 10 cents each. Books referred to promptly supplied on receipt of price. Minerals sent for examination should be distinctly marked or labeled.

(8599) P. A. B. asks: 1. I have built an electric furnace as described in SUPPLEMENT No. 1182, and use 52 volts, but cannot get the triple arc to light. None of the carbons will light when brought into contact, unless all the carbons on the same side are connected, and then only one pair of them will light. Can you explain this? A. Forty-five to 50 volts are required to produce an arc between carbons. When you place three carbons in series in the electrical furnace, the 52 volts at your disposal cannot push the current across the three air gaps in the carbons. Put the three arcs in multiple with some external resistance. 2. Can you recommend an elementary book on the electric furnace and any SUPPLEMENTS besides the above? A. We can send you thirteen papers at 10 cents each upon the electrical furnace in addition to the one you have. We do not know any book upon this special subject.

(8600) G. M. D. asks: What should be the dimensions, size and amount of wire for a 12-inch coil, 15-inch coil and 18-inch coil? Is there any definite relation existing whereby the above information may be determined from a known coil? A. The dimensions of induction coils are the result of experience rather than of calculation. The properties of the magnetic circuit and the effects of induction are well known, and can be applied to an induction for giving sparks; but almost every builder works from designs which have been wrought out by experiment and are known to give good results. The sizes and windings of certain large coils are given in Hare's "Large Induction Coils," price \$2.50 by mail.

(8601) A. B. writes: I am desirous of studying the science of electricity from the very beginning. Please suggest what would be best, and the price. A. We should advise that you buy Jackson's "Elementary Electricity," price \$1.40 by mail, and Swoope's "Practical Electricity," price \$2 by mail, with which to make a beginning of the study of electricity. After these are mastered there are many special works on separate subjects for study.

(8602) D. C. asks: Can you inform me what the solution is in which incandescent gas mantles are washed or dipped to render them incandescent? A. Oxides of the rare earths are used for coating the mantles of incandescent gas burners.

(8603) J. O. H. asks: In the building of motors or dynamos, is it a rule to use coarser wire on fields than armature, and why? A. The size of wire in field and armature is a matter of calculation, and may give either a coarser or finer wire on armature than on field.

(8604) P. S. S. asks: What solution is used in plating, for instance silver, or nickel, when batteries are used for circuit? A. For nickel the double sulphate of nickel and ammonium is commonly employed, and for silver the cyanide of silver is almost universally used. Full instructions are to be found in Langbein's "Electro-Deposition of Metals," price \$4 by mail.

Prevention of Accidents

is not always possible, but you can insure against loss of income while disabled by taking out An Accident Policy in The Travelers of Hartford, the oldest Accident Insurance Company in America and the largest in the world. These policies guarantee a weekly income while disabled and large amounts for loss of legs, arms, hands, feet or eyes. If death ensues, a stated sum is paid. \$2,000,000 have been distributed among 376,000 policy holders or their families for injurious death. A Life Policy in the Travelers Insurance Company provides safe insurance at a lower guaranteed net cost than mutual companies. Mutual companies charge for insurance and give such a share in the profits as the company may see fit. The Travelers charges for insurance only. Therefore the net cost of a policy in The Travelers is guaranteed and known beforehand, and the difference in cost is in your pocket first to last. Agents in every town, or write for interesting literature. The Travelers Insurance Company Hartford, Conn. (Founded 1863)
