RECENTLY PATENTED INVENTIONS. Agricultural Implements.

CALF-WEANER. - LEWIS H. SAUNDERS, Colby, Kans. In order to prevent a calf or colt from sucking, the inventor employs a device comprising an inner frame of flat cheekpieces, and an arched nose-yoke. The cheek pieces are spread apart at their rear ends. To the inner, arched frame an outer, arched barbed frame is pivoted, to the rear ends of which a jaw-strap is secured which passes the calf attempt to suck or push the barbs up or down, the outer frame will force the jaw-applied to all washing-machines of the type strap against the lower jaw and hold the jaw shut.

CORN-HUSKER.-ARTHUR W. RICHARDS, Indianola, Iowa. The invention is a cornhusker which is adapted to operate upon the ears of corn after they have been cut from the stalk. The novel features are to be found in two series of rollers provided with pointed teeth. Both series extend in downwardly inclined parallel planes and are simultaneously rotated. The husks adhering to the corn ears are pierced by the teeth, shredded and stripped.

DERRICK .- ALVIN HODGSON, South Ottumwa, Iowa. Mr. Hodgson has devised a simple derrick which will doubtless be found of considerable usefulness on a farm for lifting and moving heavy weights, such as hay racks, wagon bodies, slaughtered animals, and the like. On a base comprising bottom rails, standards are erected, on which a table is supported. A post has a step bearing in the rails; and a plate secured to the post has a bearing in an opening in the table. The beam is mounted to swing on the post; and the winding-drum is carried by the post. Rope connections are provided between the drum and the end of the beam.

CULTIVATOR .- FRANK G. HOAG, Battle Creek, Mich. The inventor has devised a simple, compact, and strong machine which embodies means for the removal and replace ment of a central toothed section; which also allows for the lateral adjustment of the toothed side frames, so as to cultivate both sides of a row of growing corn; and which allows the front portions of the side frames to be raised and to swing free.

Apparatus for Special Purposes.

STORAGE SYSTEM.-J. R. RECTOR, Lipan, Texas. In this invention Mr. Rector provides a house for storing perishable goods in which the goods will be kept cool without the necessity of ice or other analogous means of lowering the temperature, the temperature of the house being kept at a sufficiently low degree by a peculiar arrangement of air-circulating passages.

Engineering Improvements.

MARINE-ENGINE GOVERNOR.-MARTIN F. VOLKMANN, Santa Monica, Cal. Mr. Volkmann has provided a simple mechanism which is intended to prevent dangerous racing should the shaft break, the propeller be loosened, or Lake, Mich. The snow-plow can be quickly lifted out of the water by the pitching of the and easily adjusted to discharge snow at both vessel. The principle of the invention consists in speeding the governor upon the rise of the propeller from the water.

ENGINE-STOP .- HENRY JONES, Watertown, N. Y. This new engine-stop is arranged immediately and automatically to stop the en-gine in case of an accident. The arrangement is such that the engine can be shut down or started without interfering with the stop in duce boiled potatoes or the like to a creamy any way. The stop comprises a cylinder to consistency in the smallest possible amount which a steam pipe leads. A piston recipro- of time. The device is very simple and dur-cates in the cylinder. Between the piston and able in construction, can be cheaply manu-the throttle valve is a flexible connection. factured and easily manipulated. The valve in the steam-pipe is opened from a governor when its stem drops.

VALVE-LUBRICATOR.—PETER F. LABAN, Alton-on-the-Elbe, Germany. The lubricating means for gaging the length and clipping the liquid is distributed by the movement or action; butts of cigars as they are being manufactured. of the valve to different portions of the valveseat and between the ports in the chest. The this character which is of simple construction, valve is so constructed that it will always compact form, and very convenient in operaoccupy an operative relation to the point of tion, producing a portable implement that liquid-feed, so as to be supplied from the can be set to cut off the butts of cigars at a ducts or channels so the it car be taken up by the steam and carried to all parts that require lubrication.

view of all the proceedings. An improved curtain is provided which can be easily and quickly operated.

WASHING-MACHINE .- LAURA B. PARKER, 2874 Washington Street, Ogden, Utah. The machine is of that type in which a concave bed is employed within an outer casing, upon which the convex "rubber" rocks. The present invention is designed to supply this oscillating rubber with an elastic pressure in a more simple manner than heretofore. To that end a spring attachment of peculiar construction mentioned.

GRIPPER FOR PLATEN PRINTING PRESSES.—ARTHUR L. ANDERSON, Grundy Center, Iowa. Mr. Anderson has devised a simple gripper which will firmly hold the paper to be printed on where a narrow margin is desired. His device can be so adjusted that its inner edge will be close to the desired outside line of the printing, thereby avoiding the annoyance so often experienced when it is desired to print upon an article so as to leave a very narrow margin. Ordinarily the gripper cannot be placed so as to hold the paper by reason of the gage-pin's coming in contact with the gripper. That difficulty is now obviated.

MEANS FOR AUTOMATICALLY CLOSING SWINGING DOORS.—Edward F. Huard, Springfield, Mo. The invention is a closure for ice-houses or vaults. Its object is to pro-vide a self-closing door which guards the opening through which blocks of ice are introduced to the house or vault, preventing an improper rise in the temperature, and the accumulation of fog in the air-space of the house.

HIGH-BALL ARCHER. WILLIAM H. PEASE, Joliet, Ill. Mr. Pease has invented a simple and ingenious device for throwing a projectile by the power of a rubber band or the like. The invention comprises a body and an elastic structure which can be releasably held. The operating devices for actuating the structure comprise a trigger-arm, a connection between the trigger-arm and the holding means, a trigger working with the trigger-arm, and a spring actuating the parts normally to release the holding means

LIFTING-GATE.-ANDERSON MILLER, Shelbyville, Ind. Mr. Miller is the inventor of a gate which embodies much that is new in its construction and operation. Mechanically considered, the gate consists of a post to which a frame is hinged, free to move vertically. The frame comprises top, bottom and side members. A rod connects the top and bottom members and serves as a brace. Upon the rod is a lever. Angle-braces are secured to the top and bottom members at points adjacent to the ends of the rod, and engaging one of the side members at a point between the ends. A cord engages the lever and post and partially encircles the pulley, The handle of the lever being depressed, the cord is pulled, thereby raising the gate.

SNOW-PLOW .- PETER W. MARTIN, Thumb sides, or to discharge snow at either side. The horses propelling the plow are placed at the back, so that they are not compelled to walk in deep snow, as would be the case were they harnessed at the front.

POTATO-CREAMER.-FREDERICK W. RUCK-STUHL, and ADELE POHLMANN, Manhattan, New York city. This device is arranged to re-

GAGE AND BUTT-CUTTER FOR CIGARS. -WILLIAM HEFFLEY, Jackson Township, Lebanon county, Pa. The invention relates to The inventor has devised an apparatus of

RANGE - FINDER ATTACHMENT FOR INDEX OF INVENTIONS GUNS .- A. P. COLLINS, Manilla, P. I. Sergt.

Collins finds from practical experience that it is difficult for the average soldier to gage a distance of between 400 and 2,000 yards with sufficient accuracy to make his fire effective. He has, therefore, devised a simple attachment for use in connection with ordinary firearms which will enable a soldier to determine the range of the object to be fired at and the corresponding adjustment required to be given to the elevating sight.

FOLDING BASKET. - T. J. LANGSTON. Johnston, S. C. Mr. Langston has invented an improved form of basket of that class which have a collapsible body portion and a folding handle frame. The handles are pivoted directly to the body of the basket. The lower ends of the handles are connected with the bottom of the basket and are extended to form legs.

NOTE-Copies of any of these patents will be furnished by Munn & Co. for ten cents each. Please state the name of the patentee, title of the invention, and date of this paper.

READ THIS COLUMN CAREFULLY,-You NEAD THIS COLUMN CARFFULT, - You will find inquiries for certain classes of articles numbered in consecutive order. If you manufacture these goods write us at once and we will send you the name and address of the party desiring the information. In every case it is necessary to give the number of the inquiry. MUNN & CO.

Marine Iron Works. Chicago. Catalogue free. Inquiry No. 3066.—For manufacturers of ice-making machinery.

AUTOS.-Duryea Power Co., Reading, Pa.

Inquiry No. 3067.-For manufacturers of office specialities, household novelties and articles suitable for mail order business.

"U. S." Metal Polish. Indianapolis. Samples free. Inquiry No. 3068.—For manufacturers of auto-mobile castings.

WATER WHEELS. Alcott & Co., Mt. Holly, N. J. Inquiry No. 3069.-For dealers in dummies used in ventriloquism.

Handle & Spoke Mchy. Ober Mfg. Co., 10 Bell St. Chagrin Falls, O.

Inquiry No. 3070.-For rope-making machinery. Sawmill machinery and outfits manufactured by the Lane Mfg. Co.. Box 13, Montpelier, Vt.

Inquiry No. 3071.-For manufacturers of small engines and boilers.

Die work, experimental work and novelties manufactured. American Hardware Mfg. Co., Ottawa, Ill.

Inquiry No. 3072.-For manufacturers of paper novelties. Our specialty is cutting and forming metal parts any

shape. Metal Stamping Co., Niagara Falls, N. Y.

Inquiry No. 3073.-For manufacturers of small engines, two to three inch stroke and same size cylin-ders. Oscillating engine preferred. Gear Cutting of every description accurately done.

The Garvin Machine Co., 149 Varick, cor. Spring Sts., N.Y. Inquiry No. 3074.-For manufacturers or dealers in game markers or counters.

We design and build special and automatic machinery or all purposes. The Amstutz-Osborn Company, Cleveland, Ohio.

Inquiry No. 3075.-For manufacturers of car-building machinery.

IDEAS DEVELOPED.-Designing, draughting machine work for inventors and others. Charles E. Hadley, 584 Hudson Street, New York.

Inquiry No. 3076.-For manufacturers of rubber penholders.

Manufacturers of patent articles, dies, stamping tools, light machinery. Quadriga Manufacturing Com-pany, 18 South Canal Street, Chicago.

Inquiry No. 3077.-For manufacturers of absorb ent pulp plates. Patents developed and manufactured, dies, special

tools, metal stamping and screw machine work. Metal Novelty Works Co., 43-47 S. Canal St., Chicago. Inquiry No. 3078.-For manufacturers of tubs.

The celebrated "Hornsby-Akroyd" Patent Safety Oil

Engine is built by the De La Vergne Refrigerating Ma chine Company. Foot of East 138th Street, New York. Ma Inquiry No. 3079.-For manufacturers of cork packing.

The best book for electricians and beginners in electricity is "Experimental Science," by Geo. M. Hopkins. By mail, \$4. Muun & Co., publishers. 361 Broadway, N.Y. Inquiry No. 3080. -For wood-carving machinery.

WANTED.-A bright, active young man as assistant superintendent for a large machine shop, to take charge of all tools. Must be a bustler and familiar with modern

practice as to cutting speeds. etc. State salary and experience. H. F. W. Box 773, New York. Lugaliza No. 2081. -For manufacts **Miscellaneous** Inventions motors BANJO ATTACHMENT.-H. M. BRONSON, FOREMAN BOLLER MAKER WANTED - First class Brandon, Vt. Mr. Bronson provides an imman wanted for a modern shop building marine and proved attachment for banjos and like instrustationary boilers, and doing boiler and iron ship re-pairs. Applicants will please state age, experience ments which may be conveniently employed and will act to remove all harshness from the tone, rendering the music produced soft and UMBRELLA-STICK .- T. H. SMITH, Lansford, Pa. The invention provides an umbrella The construction is simple and durable. and is so arranged that the strength of the umbrella will not be lessened, also that the umbrella may be readily manipulated by any person of ordinary intelligence. GEM-SETTING .- R. S. BIEBER, Brooklyn, N. Y. The usual method of setting stones of diamond shape is to fasten the stone by bend-

Mechanical Devices.

VELOCIPEDE DRIVING-GEAR.-FRANCIS A. RICH. Karangahake. Auckland. New Zeasweet. land. This changeable speed-gear for bicycles comprises an ordinary friction-clutch freewheel sprocket, and a sprocket consisting of inner and outer members, normally loose re- which may be compactly folded and quickly latively to each other. A driven mechanism and conveniently brought into a position for can be shifted into operative engagement with juse. the free-wheel sprocket, or with the outer member. A rocking clutch connects or disconnects inner and outer members. A frictionroller on the rocking clutch is engaged by the guide of a rocking plate for the purpose of shifting the clutch.

PORTABLE REVOLVING THEATER. CHARLES F. BRAMHALL, Kingman, Kans. In ing small fingers over its edge. This inventhis portable revolving theater, there are em- tion is designed to make a more secure setting bodied a central stationary stage and a circular for the gems by employing a band which enrevoluble auditorium. The audience is slowly circles the edges of the gem and is held in carried around the stage so as to obtain a full place by the fingers of the setting.
