RECENTLY PATENTED INVENTIONS. Electrical Devices.

SAFETY-ALARM DEVICE FOR MARINE VESSELS .- M. SHEPARD, Edgartown, Mass. The main feature of this improvement is a ballbearing rod projecting below the hull. When the rod's lower end contacts with the bottom, the pressure against it is increased above the pressure required to hold the rod vertically at other times. This increase gives movement to the rod which makes an electric circuit and sounds an alarm upon the vessel. The cir- predetermined distance from each other. cuit closing arrangement and spring setting device are in a cylinder within the hull which carries at its lower end the ball and rod. These parts and the alarm constitute the apparatus which is telescoped into a cylinder and valve secured to, and opening through the hull for safeguarding purposes

ELECTRIC PROGRAM-CLOCK. — J. W. Pertis, Buies Creek, N. C. The invention is in the nature of a signaling clock designed to ring vibrating electrical bells at various points and at various intervals for schools, colleges, factories, and such other institutions will have a wheeled support to and from the where a daily program is necessary. The field and during operation and means whereby device has three or more automatic circuitswitches, to one of which is connected by wires relative to the rows between which cultivation a large electric bell. From other switches is to be effected. In operation the harrow will lines run to which bells are attached in vari- not jump from side to side, as is customary in ous rooms. These are all operated from one ordinary harrows. This relieves the team battery and this battery-circuit is never closed from unnecessary encumbrance and enables 't except while ringing signals on one of the to direct all energy to the draft of the malines.

MINIATURE TELEGRAPHIC INSTRU-MENT.-B. I. LEVI, New York, N. Y. In the sounder for this instrument is the combination a board with screw-holes and countersinks, a sounder mechanism with a base-plate and supports for a movable armature, screws engaging the base-plates and supports for holding them together, the screws with heads normally engaging both the board and baseplate so as to space them apart, and screws engaging the board and base-plate, the screws with heads engaging the countersinks upon the under side of the boards and connecting the board and base-plates together so as to exert pressure upon the screw heads

Engineering Improvements.

ROTARY ENGINE .- M. A. RICE. Los Angeles, Cal. The object of this invention is to provide a rotary engine which is arranged to insure easy running, to allow of cutting off to utilize the motive agent expansively to the fullest advantage.

PARALLEL ROD FOR LOCOMOTIVES. C. HOUSTON, Benson, Ariz. The object in this C. L. POORTER, Marshall, Tex. locomotives, arranged to insure a direct transmission of the power from the piston to the front and rear driving-wheels and to avoid over-heating of the pivotal connection between the main rod and the parallel rod.

Heating and Lighting.

SPREADER FOR OIL-BURNERS.—H. P. AKERS, Crisman, Indiana. The present invention refers to railroad signal lamps and the like; and the object is to provide a spreader for oil-burners which is simple and durable in construction, very economical in the use of oil, and arranged to properly spread the flame without causing smoke and without allowing dirt to accumulate in the spreader.

SAFETY-LAMP.-G. W. REILLY and C. A PHILLIP, Wichita, Kan. The invention is an improvement in that class of lamps which are adapted for burning hydrocarbon oils and are a substance which is non-combustible and which will serve in case the lamp is broken to extinguish the fire due to ignition of the oil. ment for shipment or storage. The glass lamp chamber is provided with a horizontal partition formed integrally with and also made thinner than the chamber or body, and thus made easily frangible.

Machines and Mechanical Devices.

LOOM .- E. VAHLE, West Hoboken, N. J. The object of the improvement is to provide through the open shed by a spoolless shuttle, to produce a fabric having double weft-threads burning can injure nothing on which it stands. York, N. Y. The present invention refers to production of plain goods as well as figured goods with the aid of a jacquard.

BEARING FOR DREDGING-MACHINE. machines, more particularly a bearing for the shaft on the free end of the beam, the arrangement being such that any sand passing into the bearing during the dredging operation is quickly and continually washed out to prevent the same from cutting into the bearing to the detriment of the proper working of the

WINDMILL-PUMP COUPLING.—C. W. windmill-pump coupling. The object is to make it possible to throw the pump-handle in ginal form. gear and the windmill out of gear, or vice versa, by means of the hand-lever alone, the

Of Interest to Farmers,

PINDAL-PLANTER .- A. TYLER, Quitman, Ga. Mr. Tyler's object in this case is to provide a machine of simple and durable construction which while especially adapted for posit in the ground all kinds of seeds and the Plainfield, N. J. The improvement has refer-like ordinarily planted in hills separated a ence to those tablets which are formed of a RAPID-FIRE PISTOL

ANIMAL-CRATE.-W. A. STEWART, Wolcottville, Ind. In this invention the object in view is to provide a construction which may be used to contain a number of animals, such as hogs or pigs, the crate being equipped with a tray in which one animal at a time may be laid and held in a position convenient for operation, such as pulling a tusk from the mouth of a hog.

HARROW.—S. PREJEAN and G. C. BELLOCO. Belle Alliance, La. The purpose of this invention is the provision of a harrow which it can be kept in one position while rotating

Pertaining to Vehicles.

BICYCLE-SUPPORT.-M. HENOCH, Laporte, Ind. This improvement has particular application to a portable support to be attached to the front of the machine. The majority of supports which support the wheel upright at four points tends to permit the wheel to rock when placed upon uneven surfaces, thereby presenting an inclination toward the overturning of the wheel when the support receives a jar or shock; but by elevating the front wheel slightly from the ground and providing a three-point support formed by the two arms of this device and the rear wheel the tendency to overturn is obviated.

Miscellaneous.

EYEGLASSES .- W. H. WEASER, Pittsfield, Mass. In this case the object is to provide new and improved eyeglasses arranged to inthe motive agent at any desired point; to sure a firm connection between the bow-spring, sheet without requiring practice or knowledge permit reversing the engine, to prevent end-wise thrust of the piston in the cylinder and loosening of the bow-spring or nose-guard, and to allow of adjusting the lenses up or down relative to the nose-guards.

SPUR ATTACHMENT FOR STIRRUPS.improvement is to provide a parallel rod for struction a body-bar having an offset carrying a rowel is so hinged at its forward end to the stirrup that when the latter is not in use the bar will hang perpendicularly downward, but when the foot is placed in the stirrup the bar will be brought to a horizontal position, the offset carrying the rowel fitting snugly to the rear of the boot heel, enabling the spur to be as conveniently brought into action as if the spur were attached to the boot as ordinarily, but leaving the boot free from the spur at the moment of dismounting.

FAN ATTACHMENT FOR SEWING-MA-CHINES.—O. G. OGDEN, Louisville, Ky. In this case the object is to provide a construction by which the fan attachment can be readily connected with and disconnected from the fly-wheel of the machine and to so construct the fan-supporting devices and the connecting means for securing the same to the fly-wheel that these means may be provided with a chamber adapted to contain adjusted to one side or the other of the flywheel and can be turned in the knockdown position of the parts to secure a compact arrange-

CANDLESTICK .- W. NICOL, 52 Tay Street, and J. H. Stewart, 47 Tay Street, InverDe Land, Fla. Mr. Drake's invention is an imcargill. New Zealand. The invention refers provement in that class of suspensory bandages cargill, New Zealand. The invention refers to candlesticks, its object being to provide one that candles of any size may be held equally firm in the holder or socket, the candle easily raised as it burns down that almost the whole may be burned, and the spring fixed from the side of the bowl facilitating cleaning. The a loom for weaving all kinds of textile fabrics bottom of the bowl is domed inward, so usual manner. and arranged to carry double-up weft-thread that should the wick fall through alight, any in each pick, the arrangement permitting the The handle is attached to the bowl in such decorative lighting by electric lamps of the a way that any unusual pressure on the spring incandescent type; and the object is to prowill not break it. These inventors have secured another patent wherein the invention pro-P. SMALL, Oroville, Cal. In this instance the vides a candlestick arranged that candles of purpose is to provide a bearing for dredging- any size may be firmly held in the socket of the candlestick, the candle easily raised as it burns down, enabling most of it to be burned.

MARKING-BOARD.-F. MOEHLE. Mason City, Iowa. In this instance the improvement relates to a device for facilitating marking and cutting glass, cardboard, and like articles. By means of the invention a sheet of glass, for example, may be readily marked to the desired form and dimensions and cut, or a sheet of DECKER, Charles City, Iowa. In this patent cardboard may be similarly treated. For exthe invention is in the nature of an improved ample, a mat for pictures may be marked and cut with any desired exterior and interior mar-

WATCH-GUARD.-W. F. MARTIN, New York. N. Y. This invention comprises a versa, by means of the hand-lever alone, the same being intended to provide a pump which peculiarly-constructed guide intended to have purpose in this case is to provide a device

can be made at small cost and great simplicity the chain of the watch run through it, so for direct connection with the shutter of a that when a thief grasps the watch by the camera having means for supporting and exinterfering, however, with the withdrawal of which may be brought about by direct connecthe watch by grasping the watch itself, in tion with a cylinder operated at the time guide.

> WRITING-TABLET .-- H. V. LOUGH, North ence to those tablets which are formed of a number of semistiff sheets connected by a pivot or the like, so that each sheet may be written on and each conveniently referred to when desired. Ordinarily these tablets possess the disadvantage that the sheets or cards bear their relative positions cannot be changed, so as, for example, to place the top sheet on the bottom, or vice versa.

> NON - REFILLABLE BOTTLE. — M. M. KEARNEY, Scranton, Pa. Mr. Kearney's purpose is to provide a construction of bottleparticularly a construction of the neck of a bottle, stopper, and valve-which will prevent the possibility of refilling the bottle after the original contents have been poured out. The bottle in its entirety is simple and readily understandable to any person of ordinary intelligence.

> MATCH-SAFE .- F. KING, New York, N. Y. The purpose in this case is to provide a safe or receptacle for matches so constructed that the matches can be removed singly only, one after the other, and to render such removal convenient and expeditious; also, to furnish exteriorly-operated means for insuring the matches being compactly and accurately fed to the outlet of the match safe.

OVERSHOE FOR HORSES.—J. E. HOFF MAN, New York, N. Y. The object in this case is to provide an overshoe of simple and inexpensive construction, that may be readily secured to the hoofs of horses or other draft in animals and as easily removed therefrom and that when in place will effectually prevent the animal from slipping on icy or otherwise slippery pavement.

MUSICAL INSTRUMENT.—H. E. HIBSH-MAN, Newark, N. J. In this patent the invention relates to reed instruments of the mouthharmonica type, and its object is to provide a new and improved instrument which is simple and durable in construction and arranged to enable a person to properly execute a piece of music with the aid of a perforated musicof music.

DEVICE FOR EXHIBITING GOODS.—M. J. BEBB, Xenia, and E. G. EATON, Athens, Ohio. In this patent the invention is designed for suspending and displaying goods in stores or shops from the ceiling or any other fixed overhead support, and is particularly useful for displaying handkerchiefs, ribbons, hosiery, underwear, belts, neckwear, laces, shirt-waists, towels, etc., to the best possible advantage.

APPARATUS FOR FORMING CEMENT WATER-TANKS. J. T. DONAHOO, Edgar, Neb. Hand labor is usually employed for forming tanks that are classified as apparatus $f_{0}r$ firming cement water-tanks; and it is the object of the inventor in this instance to provide an apparatus by which the work may be quickly facilitated and the tank thereby finished in a shorter time as well as in better form and also at the least cost.

DEVICE FOR FILLING FOUNTAIN-PENS. -L. Fisk, Woodcliff, N. J. Provision is made in this invention for the easy filling of the pen by merely holding the mouth of the penreservoir to the spout of the instrument, and upon operating this instrument the ink is caused to flow into the pen-reservoir, all of this being effected without danger of spilling the ink, as repeated operations will not overflow the pen-reservoir.

SUSPENSORY-BANDAGE.—E. R. DRAKE, having a leg-band connecting the scrotal bag or pouch with the body-band. He has devised an improvement in such leg-bands and they may be worn with entire comfort, besides sliding more easily and being more durable than those constructed and arranged in the

MIRROR DECORATING AND ILLUMINATvide an illuminated garland for use on mirrors, walls, interior and exterior balconies, and other objects and arranged to heighten the ornamental effect of the object as well as provide the desired illumination of the surround-

SCISSORS-HOLDER.—A. E. MOORE, Winnipeg, Canada. The prime object in this case is to provide means for holding the scissors Within convenient reach of the user and by which the scissors may be held securely and readily engaged with or disengaged from the holder. To this end the invention comprises a body, gripping-fingers carried thereby and a body, gripping-ingers carried thereby and Inquiry No 4849.—For parties engaged in the serving to hold the scissors, and a device at development of electrical inventions. the rear of the body for attaching it to the clothing of the wearer.

FLASH-LIGHT ATTACHMENT FOR CAM-

chain the watch will strike the guide and ploding a flash-light charge and automatically cannot be withdrawn, this arrangement not and simultaneously operating the shutter, which case the chain will run idly through the of the explosion by the flash-light material and connected by a tube with the shutter or by the automatic compression of a bulb in tube con-

RAPID-FIRE PISTOL.—W. B. KNOBLE, Tacoma, Wash. This pistol is specially designed for army and navy use. object to the 38-caliber revolver's lack of shocking power. It being impossible with the length of barrel practicable in a pistol to a fixed relation to each other—that is to say, obtain velocities with small bores sufficient to make up for lack of energy and stopping power, the only way to acquire the power lies in the use of a larger, heavier bullet having greater striking surface and propelled with a velocity unobtainable from a revolver. This powerful weapon does not exceed small bores in weight and size, and for use as a pocket arm is smaller, lighter, and more compact than magazine pistols of similar caliber.

> Note.-Copies of any of these patents will be furnished by Munn & Co. for ten cents each, Please state the name of the patentee, title of the invention, and date of this paper.

Business and Personal Wants.

READ THIS COLUMN CAREFULLY,-You will find inquiries for certain classes of articles numbered in consecutive order. If you manufacture these goods write us at once and we will send you the name and address of the party desiring the information. In every case it is necessary to give the number of the inquiry. MUNN & CO.

Marine Iron Works. Chicago. Catalogue free.

Inquiry No. 4830.—For machinery used in mak-g hardwood toothpicks.

AUTOS.-Duryea Power Co., Reading, Pa.

Inquiry No. 4831.—For an economical process of

"U. S." Metal Polish. Indianapolis. Samples free.

Inquiry No. 4832.-For manufacturers of hand recrushers. Handle & Spoke Mchy. Ober Mfg. Co., 10 Bell St.,

Inquiry No. 4833.—For a machine to turn wooden rolls of about 3% to 3% inches in diameter and 36 inches long, also to bore 1%-inch square hole through the rolls.

Sawmill machinery and outfits manufactured by the aneMfg. Co., Box 13, Montpelier, Vt.

Inquiry No. 4834.—For a thread-cutting die

Sheet, bar, rod or wire, cut, formed, any shape. Metal Stamping Company, Niagara Falls, N. Y.

Inquiry No. 4835.—For makers of pliable iron, such as used for grilles, etc.

American inventions negotiated in Europe, Feux Hamburger, Equitable Building, Berlin, Germany.

Inquiry No. 4876.—For machinery for the mapu-facture of starch from the roots of the cassava plant.

Automobiles built to drawings and special work done promptly. The Garvin Machine Co., 149 Varick, cor. Spring Streets, New York.

Iuquiry No. 4837.—For the address of the Union Parer and Corer Co., manufacturers of a tin potato peeler. IF Send for new and complete catalogue of Scientific

and other Books for sale by Munn & Co., 361 Broadway New York. Free on application

Inquiry No. 4838.—For manufacturers making patented articles by contract, made of part wood and part sheet steel, We manufacture anything in metal. Patented arti-

les, metal stamping, dies, screw mach. work, etc., Metal Novelty Works, 43 Canal Street, Chicago.

Inquiry No. 4×39.—For makers of small punched gears, such as clock gears. The largest manufacturer in the world of merry-go-

rounds, shooting galleries and hand organs. For prices and terms write to C. W. Parker, Abilene, Kan. Inquiry No. 4840.—For manufacturers of gasoline lamps for country residences.

Empire Brass Works, 106 E. 129th Street, New York,

N. Y., have exceptional facilities formanufacuring any article requiring machine shop and plating room.

Inquiry No. 4841.—For manufacturers of dredges and ditching machinery.

The celebrated "Hornsby-Akroyd" Patent Safety Oil Engine is built by the De La Vergne Refrigerating Machine Company. Foot of East 138th Street, New York.

Inquiry No. 4842.—For makers of small induction coils outlits, etc., for the mail order business.

Contract manufacturers of hardware specialties, machinery, stampings, dies, tools, etc. Excellent marketing connections. Edmonds-Metzel Mfg. Co., Chicago.

Inquiry No. 4843.—For molds for molding articles, such as pails, etc.

Manufacturers of patent articles, dies, metal stamping, screw machine work, hardware specialties, machinery and tools. Quadriga Manufacturing Company, 18 South Canal Street, Chicago,

Inquiry No. 4844.—For manufacturers of tobacco

Inquiry No. 4845.—For makers of long distance telephones.

Inquiry No. 4846.—For outfits for bath purposes and Turkish baths.

Inquiry No. 4847.—For dealers in trial test sets for opticians.

Inquiry No. 4848.—For a machine for drilling two holes at once in a joist, used by electricians for inside

Inquiry No. 4850.—For manufacturers or dealers in slot or coin yending or amusement machines. Inquiry No. 4851.—For manufacturers of gun tools and locksmith materials.

Inquiry No. 4852.—For dealers in sewing machine repairs.
