## Business and Personal Wants.

READ THIS COLUMN CAREFULLY,-You will find inquiries for certain classes of articles numbered in consecutive order. If you manu-facture these goods write us at once and we will send you then ame and address of the party desir ing the information. In every case it is necess sary to give the number of the inquiry. MUNN & CO.

Marme Iron Works. Chicago. Catalogue free Inquiry No. 6063.-For manufacturers of salt driers.

AUTOS.-Duryea Power Co., Reading, Pa.

Inquiry No. 6064.—For manufacturers of rain-makers supplies, canvas, explosives, etc.

"U.S." Metal Polish. Indianapolis. Samples free. Inquiry No. 6065.—For a computing device con-sisting of two or more dials. operated with a stylus or like article, to be used in multiplication and division only.

For bridge erecting engines. J. S. Mundy, Newark, N. J Inquiry No. 6066.-For parties to manufacture men's collars to order, also for makers of machines for securing metal tips to shoe strings.

Perforated Metals, Harrington & King Perforating Co., Chicago.

Inquiry No. 6067.—For parties to do drop press work on wire steel.

Handle & Spoke Mchy. Ober Mfg. Co., 10 Bell St., Chagrin Falls, O.

Inquiry No. 6068.—For makers of Newhall and Julius Smith's electric tiring batteries. If it is a paper tube we can supply it. Textile Tube

Company, Fall River. Mass.

Inquiry No. 6069.-For makers of machines and supplies for tattooing. Sawmill machinery and outfits manufactured by the

Lane Mfg. Co., Box 13, Montpelier, Vt.

Inquiry No. 6070.-For manufacturers of hollow glass novelties.

D. A. Beaton, Practical Lead Burner, P. O. Box 334 Woburn, Mass. Fifteen years' experience. Inquiry No. 6071.-For manufacturers of pin-pointed wires.

Special Machinery to order, manufacturing, metal

stampings, etc., Brickner Machine Co., Tiffin, Ohio. Inquiry No. 6072.-For makers of solder for soldering aluminum.

American inventions negotiated in Europe. Wenzel

& Hamburger, Equitable Building, Berlin, Germany.

Inquiry No. 6073.-For machinery for extracting oils from oranges and lemons, and for parties engaged in the same. Patented inventions of brass, bronze, composition or

aluminum construction placed on market. Write to American Brass Foundry Co., Hyde Park, Mass.

Inquiry No. 6074.-For apparatus for burning rood into charcoal.

FOR SALE.-Valuable patent, \$66,159. Specifications and drawings sent on request. H. O. Robinson, 445 Saratoga Street, East Boston, Mass.

Inquiry No. 6075.-For a very light-draft, stem wheei gasoline boat 25 to 35 feet length. The celebrated "Hornsby-Akroyd" Patent Safety Oil

Engine is built by the De La Vergne Machine Company Foot of East 138th Street, New York. Inquiry No. 6076.-For makers of small Ferris wheels.

DRY BATTERIES.-How to make and use them. Practical, with original drawings. Mailed for 25 cents. Spon & Chamberlain, 123 S Liberty Street. New York.

Inquiry No. 6077.-For manufacturers of napping machines. Sheet metal, any kind, cut, formed any shape. Die

making, wire torming, embossing, lettering, stamping, punching. Metal Stamping Co., Niagara Falls, N. Y. Inquiry No. 6078.-For a railroad lantern which burns acetylene gas.

WANTED.-Hardware novelties and other articles of merit. Must be good sellers. Will buy outright or sell on royalty basis. The Cleveland Sales Company, 407 A reade, Cleveland, Ohio.

Inquiry No. 6079.—For a thermometer which will re\_ister 500 deg. or 600 deg. below zero Fah, Manufacturers of patent articles, dies, metal stamp-

ing, screw machine work, hardware specialties, machin cry and tools. Quadriga Manufacturing Company, 18 South Canal Street, Chicago,

Inquiry No. 6080.-For makers of worms for corkscrews. Two patents for sale. Supply tanks for water service, No. 769,550. Valve, a cut-off, for supply tanks, No.

737,941. Can furnish some valves, cut-off, in working order. P. J. Leithauser, Clarendon, Texas. Important Patent For Sale.—The only perfect horn for talking machines. Patent No. 771,441 is a basic

patent absolutely necessary to manufacturers of talking machines. Address Horns, Box 773, New York. WANTED.-First-class man for engineering depart-

ment. One familiar with shop practice and designing, and able to draw up ideas. State age, experience and salary expected. Address The Ohio Brass Co., Mans field. Ohio

FOR SALE.-Canadian patent No. 83,867. dated Nov. 10, 1993. Covering vital points in telephone develop-Important subsequent improvements free to purchaser. Address Dennis O'Brien,

Limestone, New York. Winona, Minnesota.-Population, 21,000-Wants Manufacturing Plants. For particulars address Geo. W. Gregory, Secretary of Reard of Trade.

HINTS TO CORRESPONDENTS.

Names and Address must accompany all letters or no attention will be paid therete. This is for our information and not for publication. References to former articles or answers should give date of paper and page or number of question. Inquiries not answered in reasonable time should be repeated; correspondents will bear in mind that some answers require not a little research, and, though we endeavor to reply to all either by letter or in this department, each must take his turn.

us turn. Buyers wishing to purchase any article not adver-tised in our columns will be furnished with addresses of houses manufacturing or carrying the same.

the same. Special Written Information on matters of personal rather than general interest cannot be expected without remuneration. Scientific American Supplements referred to may be bed of the office. Price 10 cents each,

had at the office. Price 10 cents each. Books referred to promptly supplied on receipt of

price. Minerals sent for examination should be distinctly marked or labeled.

(9465) S. A. C. asks: Will you please tell me why the problem of squaring the circle is said to be impossible? I know that the ratio, but how can anyone say that a method can never be found for drawing two lines in that ratio? We have many lines which are related to each other by incommensurable ratios, and I fail to see why that particular ratio should be impossible. I am always laughed at when I say I am trying to square the circle. A. The problem of squaring the circle requires the finding of the side of a square whose area shall be equal to that of the given circle. No such square can be found. The area of a circle is  $\pi r^2$ , as is proved in geometry. The numerical value of  $\pi$  is 3.141592, etc. It has been calculated to 250 places of decimals, and will never end. That means that it has no exact value. Any desired degree of approximation may be used, but in the end there is only an approximation, and not a definite, accurate result. Since  $\pi$  has not an exact numerical value,  $\pi r^2$  has not an exact numerical value. No circle can have its area expressed in a whole number if its radius, or diameter, or circumference is expressed in a whole number; and on the other hand, if the area of a circle were a whole number, the radius, diameter, or circumference could not be a whole number. Now, if the area of a circle is not a whole number, the square root of that area, which is the side of the square of the same area, will not be a whole number, nor will the square root ever terminate, however far it is carried out. Thus you will see that the side of a square of the same area as any given circle cannot be found. All such constructions as you inclose are more or less close approximations, useful in mechanical drawing, but of no value in exact mathematical work. 'The squaring of the circle is known to every mathematician to be impossible. In application of this, take 1 inch as the radius of a circle; the area is 3.1416 square inches nearly. The side of the equivalent square is 1.7668 what is meant when it is said that the squaring of a circle is impossible.

(9466) C. E. F. asks: Could you tell me the properties that they use in making  $dr \boldsymbol{y}$ batteries? A. The materials used in dry bat teries are sal-ammoniac, zinc oxide, plaster of Paris, sometimes flour or starch and water. Powdered carbon and binoxide of manganese are used on the carbon plate. For full in structions how to proceed in making dry cells. we would refer you to SCIENTIFIC AMERICAN SUPPLEMENT, Nos. 1001, 1383, and 1387, price 10 cents each. These give the whole story with drawings, sizes, and descriptions.

(9467) H. S. asks: Will you kindly give in your Notes and Queries brief explanation of the optics of the so-called fixed focus lens used in cameras of the "Kodak" type? A. A "fixed-focus" lens is one so adjusted that all objects in the field are in sufficiently good focus for a landscape picture. It must have a short focus, and can only be used on a comparatively small plate. The shorter the focus

1 part, water, 2 parts. All parts are given | subject in few words, and are thus in harmony by weight. All dry cells owe their action to with the spirit of the whole. Among the ammonium chloride. We have published in themes treated are compressed air, mechanical the SCIENTIFIC AMERICAN SUPPLEMENT, Nos. refrigeration, gas and gasoline engines, and 1383 and 1387, price 10 cents each, most ex- hydraulic elevators. The diagrams and illuscellent directions and drawings for making trations are not reproductions from photodry cells. You cannot do better than to get graphs of old cuts, but were all drawn by these latest instructions and follow them. hand for the particular purpose in view. Evi-The directions for compounding the formulas dently neither time nor expense has been are much more in detail than can be given in spared to make the manual a success as a are much more in detail than can be given in a note. 2. Also, have you a later issue of teacher and guide, and the result seems to "Wrinkles and Receipts" than 1876? If so, have fully justified the expenditure. send price, and I will get one. A. There has been no new edition of "Wrinkles and Receipts" since 1876. We recommend you to purchase "The Scientific American Cyclopedia of Receipts," last (1901) edition, containing 15,000 receipts, 734 pages, cloth bound, price \$5 by mail or express prepaid.

NEW BOOKS, ETC.

VON KRIEGSSCHIFFEN. Gefechtswerte Von Otto Kretschmer. Sonderab-druck aus der Zeitschrift Schiffbau. V. Jahrgang. No. 18-20. Emil Grott-ke's Verlag, Berlin SW. 12, Wilhelm-strasse 105. Price, 50 cents.

The readers of the SCIENTIFIC AMERICAN are doubtless familiar with Mr. Kretschmer's ters into the problem, is an incommensurable star to the star and the fighting value of ships. In this pamphlet he has given a very An thorough explanation of the underlying mathematical principles upon which he places his conception of fighting values. His computa-  $\begin{vmatrix} Ax \\ Ax \end{vmatrix}$ tions, of course, are based upon those factors which can be determined with certainty, Ba Banamely, such factors as guns, armament, armor, engine power.

> PRACTICAL MEASUREMENTS IN MAGNETISM AND ELECTRICITY. By George A. | Be Hoadley, A.M., C.E. New York, Be Cincinnati, and Chicago: American Be Book Company, 1904. 12mo.; pp. Bel Bell Price 75 cente 111. Price, 75 cents.

> This small volume has been prepared for the purpose of enabling students in scientific Bil courses in preparatory schools to prepare for the more advanced instruction in college. It Be Bo consists of numerous experiments in electricity and magnetism, which show the various principles and laws governing these forces. The book is very completely illustrated with diagrams and cuts, and treats of such subjects as grams and cuts, and treats of such series Bo magnetic induction, galvanometers, batteries Bo of various types, resistances and the measure-between the series wires, etc. Bo ment of the resistance of batteries, wires, etc. It will be found to very completely answer the  $\begin{vmatrix} B0\\ B0 \end{vmatrix}$ purpose for which it was written.

THE TELESCOPE. By Thomas Nolan, M.S., A.M. New York: D. Van Nostrand Company, 1904. 32mo.; pp. 128. Price, 50 cents.

This volume forms the second edition, revised and enlarged, of this practical and useful little Bra Brandbook. Besides the chapter on the optical Bra handbook. Besides the chapter on the optical principles involved in the construction of refracting and reflecting telescopes, the second Bri edition contains a new chapter on the evolution of the modern telescope to date—an evolution which has made possible the wonderful | Bri progress in celestial photography, which has revealed so many new stars and satellites. The inches. This is close enough for ordinary pur- book also contains a list of all recent books, poses, but is not mathematically exact and scientific papers, and periodical literature re-never can be calculated to exactness. This is lating to telescopes, observatories, celestial what is meant when it is said that the super-photography spectroscopy and spectroscope photography, spectroscopy and spectroscopes, telescopic accessories, and the making of observations.

THE CENTRIFUGAL PUMP, TURBINES, AND WATER MOTORS: Including the the Car Car Theory and Practice of Hydraulics. By Charles H. Innes, M.A. Man-chester, England: The Technical Car Car Car Publishing Company, Ltd., 1904. New York: D. Van Nostrand Company. Car Car 12mo.: pp. 340. Price. \$1.75.

The present, or fourth, edition of this valuable work has been enlarged by the addition of a chapter on centrifugal pumps for high lifts, and fans or blowers capable of creating considerable pressures. Following the opening chapters on hydraulics, the measurement of the power of streams, friction of piping, etc., hydraulic engines and both axial and radial flow turbines are discussed theoretically and described practically. The Pelton or tan- Car gential water wheel is also dealt with, and there are several chapters on centrifugal Cas pumps. One chapter deals with the great hy- $C_{as}$
