

quired for a heavy load. So of motors. That is all there is to it. You must not hitch a single cell to a motor which ought to have a team of ten cells to make it move. Many do not realize this very simple point.

NEW BOOKS, ETC.

MARINE ENGINES AND BOILERS. THEIR DESIGN AND CONSTRUCTION. By Dr. G. Bauer and Leslie S. Robertson. New York: The Norman W. Henley Publishing Company, 1905. Medium 8vo., pp. 772; 550 illustrations; numerous tables. Price, \$9 net.

This valuable work is a translation of the original book compiled by Dr. G. Bauer, the Engineer-in-Chief of the Vulcan Works, Stettin. It was translated from the second German edition by E. M. Donkin and S. Bryan Donkin, associate members of the Institute of Civil Engineers, and is edited by Leslie S. Robertson, member of the Institute of Civil Engineers and secretary to the Engineering Standards Committee. The fact that the original German work was written by the chief engineer of the famous Vulcan Works, Stettin, is in itself a guarantee that this book is in all respects thoroughly up-to-date, and that it embodies all the information which is necessary for the design and construction of the highest types of marine engines and boilers. It may be said without fear of contradiction, that the motive power which Dr. Bauer has placed in the fast German liners that have been turned out of late years from the Stettin Works, represents the very best practice in marine engineering of the present day. German textbooks have a well-earned reputation. They are clearly written; thoroughly systematic; theoretically sound; and they all have a characteristic breadth, thoroughness, and detail; while the character of their plans, drawings, tables, and statistics is almost invariably above reproach. The present work embodies, in a marked form, all of these characteristics. The illustrations are careful reproductions from actual working drawings, with some well-executed photographic views of completed engines and boilers. Among the latter we note the engines of the Japanese armored cruiser "Yakumo," the quadruple-expansion engines of the "Deutschland," and of the "Kaiser Wilhelm II.," and many other specimens of high-class marine work. Part I. is devoted to Main Engines, and in Section V. of this part, relating to details of main engines, there are no less than 178 illustrations. Part II. is devoted to pumps; Part III. to shafting, resistance of ships, and propellers, in Section III. of which, devoted to the screw propeller, there are 35 illustrations; Part IV. treats exhaustively of pipes and their connections; Part V. of steam boilers; Part VI. of measuring instruments; Part VII. is devoted to various details; and Part VIII. contains a very complete arrangement of various tables. Among the many text-books that come to the Editor's desk for review, we have rarely seen one that calls for such unqualified commendation as this.

OFFICIAL CATALOGUE OF THE EXHIBITION OF THE GERMAN EMPIRE AT THE INTERNATIONAL EXPOSITION, ST. LOUIS, 1904. Edited by the Imperial Commissioner. Berlin: George Stilke. 8vo.; pp. 538.

This handsome volume is at once a characteristic memento of the St. Louis Exposition and a forcible object lesson on the aesthetic side of the printer's art. Incidentally, in its embellishments, it calls to mind that "new art," which received such striking illustration throughout the whole of the German exposition at St. Louis. The letterpress throughout is strikingly bold and wonderfully harmonious, and on every page of it there is evidence of the most careful consideration of the composition. The work is no mere bald catalogue of exhibits; for under each department there is given an amount of information as to the history and practice of each art that renders this work almost a cyclopedia of the modern German industries.

PLANK-FRAME BARN CONSTRUCTION. By John L. Shawver. New York: David Williams Company, 1904. 12mo.; pp. 35. Price, 50 cents.

This book is the compilation of articles that appeared in "Carpentry and Building." Its author has had a great deal of experience in the construction of plank-frame barns—barns which have been growing in popularity in various sections of the country, particularly in the West. In the present small volume he points out the advantages of this form of barn construction, and shows that a saving of time, labor, and material may be had by employing it.

THE AUTOMOBILE HANDBOOK. By L. Elliott Brookes. Chicago: Frederick J. Drake & Co., 1905. 16mo.; pp. 320. Price, \$1.50.

This is one of the most practical handbooks for the motor-car user which we have yet seen. The subjects described are arranged in alphabetical order, and are very concise. Information concerning all types of automobiles is contained in its pages, and this information is supplemented with very good line drawings of a simple character. The book also contains a considerable number of useful tables, and formulas for calculating horse-power and for making brake tests of motors are included in the book. The work will be found a very handy pocket volume by every automobilist.

TYPE STUDIES FROM UNITED STATES GEOGRAPHY. By Charles A. McMurray, Ph.D. New York: The Macmillan Company, 1904. 8vo.; pp. 288; 99 illustrations. Price, 50 cents.

This book contains a series of simple type studies of the United States, intended to introduce children to the geography of our country. The book can be used as auxiliary to the regular textbook, in the fourth, fifth, and sixth grades. It describes various interesting geographical and engineering features of the United States, such as the large rivers, the highest mountains, the great lakes, the prairies, the pine forests and lumbering, coal mines, irrigation, salmon fisheries, etc.; and all these descriptions are photographically illustrated.

THE TIMBERS OF COMMERCE AND THEIR IDENTIFICATION. By Herbert Stone, F.L.S., F.R.C.I. London: William Rider & Sons, Ltd., 1904. 8vo.; pp. 311; 186 photo-micrographs. Price, \$3.

This book describes briefly all the commercial timbers met with in England and her colonies, as well as a few others which are likely to be heard of in the future. All the genera mentioned are illustrated by photomicrographs, showing a cross section three times the actual size, or as it would be seen by an ordinary hand magnifying glass. In some cases a single illustration serves for more than one genus; but wherever two or more distinct types of the same genus are described, separate illustrations have been provided, and the specific name is then quoted. Wherever possible, the photographs have been so taken that the medullary rays run in the same direction, the pith side downward. The photographs are actual silver prints from the negatives, and hence are much sharper and display considerably more detail than were they reproduced from half-tone cuts. The book should be very useful to all who have to do with woods for any purpose.

AUSTRALIAN MINING AND METALLURGY. By Donald Clark, B.C.E. Melbourne: Critchley Parker, 1904. 8vo.; pp. 620. Price, \$8.50.

This book is the first exhaustive work on the subject to be published in Australia. The information contained in it is thoroughly up-to-date and reliable. All the great Australian mines are dealt with in detail, besides being fully descriptive of geological conformation, general resources, the methods employed in mining, and the metallurgical process adopted in treatment and extraction. The text embraces a critical examination and commentary upon working detail and means to ends, which cannot fail to be highly instructive to the most advanced mining men, and of special value to students. The work is divided into sections according to the different States, and western Australia, because of its importance, is described with great detail; but the mines of Tasmania, Queensland, Victoria, and New South Wales are also discussed very thoroughly. The book is illustrated with numerous photographs and drawings.

Rambler

This is pre-eminently a family car. Its enjoyment is not confined to the hours when the men of the household are free; women and children can use it meanwhile. Operation is by one lever, pedals and a throttle attached to the steering wheel. The hand that steers is the hand that controls. Ignition is automatic.

HAIR.

Guaranteed by Bank.

We will send you an Evans Vacuum Cap by prepaid express, to use thirty days, and the Jefferson Bank of St. Louis will give you a certificate agreeing to return to you the price of the Cap if you do not cultivate a sufficient growth of hair within the trial period to convince you of the effectiveness of this method. The bank will also specify that you are to be the judge as to the benefits derived. From this arrangement you will observe that if the Cap fails to make your hair grow, we will be the only loser in the transaction, for you understand the price of the appliance would be deposited with the bank, subject to your own order—not ours—and we pay all express charges. You do not have to have faith to get results from the use of our appliance, for if you will apply a strong vacuum to your scalp each day and draw the blood to the hair roots, your hair will grow whether you want it to or not. The hair is an independent little plant that really has a tendency to grow, and all it needs is the right kind of help, and the Evans Vacuum Cap is the only effective means of accomplishing the work. Even one application of a vacuum gives the scalp a pleasant, tingling sensation that denotes the presence of new life in the scalp and which cannot be obtained by any other means.

Let us send you some literature about the appliance—even if you are not in need of it, we know you will be interested in this invention and in what it does.

Paper, making stretchable, J. Arkell	
Paper, mechanism for making stretchable crinkled, J. Arkell	
Paper or other flexible material, forming rolls of sheets of, C. J. Bellamy	

BUILD YOUR OWN BOAT

BY THE BROOKS SYSTEM

If you can drive a nail and cut out a piece of material from a full sized pattern you can build a canoe, row boat, sail boat or launch, in your leisure time, at home, and the building will be a source of profit and pleasure. All you need is the patterns, costing from \$2.50 up, and materials from \$5.00 up. The tools are common in every household. Patterns of over forty styles and sizes, all lengths, from 12 to 55 feet.

The Brooks System consists of exact size printed paper patterns of every part of the boat, with detailed instructions and working illustrations showing each step of the work, an itemized bill of material required and how to secure it. Over six thousand amateurs successfully built boats by the Brooks System, last year. Fifty per cent of them have built their second boat. Many have established themselves in the boat manufacturing business.

Catalogue and particulars free. For 25 cents 100-page catalogue containing valuable information for the amateur yachtsman, showing several working illustrations of each boat and a full set for one boat. Full line in knock-down and complete boats. When so ordered patterns are expressed, charges prepaid C. O. D., to allow examination.

BROOKS BOAT MANUFACTURING COMPANY
Originators of the Pattern System of Boat Building 405 Ship St., Bay City, Mich., U. S. A.

Washburne's Patent Adjustable "O.K." Paper Fasteners

The neatest and most efficient of the whole "Paper Fastener Tribe."

Attached with the thumb and finger. Absolutely sure. Can be used over again. No points to catch. Lies flat. Will not rust. Made of brass.

Handsome in appearance, and they always work.

Put up in brass boxes of 100 Fasteners each. Ten boxes to a carton. Price 20 cents a box, \$1.50 per 1,000, at all stationers or from the Manufacturer, postage or express prepaid. Sample box 10 cents. Illustrated booklet free. Liberal discount to the trade.

JAMES V. WASHBURN, Mfr.
210 East Genesee St., Syracuse, N. Y.

EASY HILL-CLIMBING.

"The cyclist saves himself much sorrow if on his wheel he has the MORROW."

The steepest hill is as easily ascended as descended if the rider takes the precaution of having attached to his machine the very latest model of

THE MORROW BRAKE

which has every possible improvement tending toward safety, simplicity and efficiency. It ensures easy comfort to the rider under all road conditions. All parts are cut from soft steel and are interchangeable. Only one clutch—the Forward Drive. Symmetrical in design, perfect in every detail. No increased friction when pedaling. Price \$5.00.

ECLIPSE MACHINE CO., Elmira, N. Y., U. S. A.

TWO GREAT WONDERS

The Wonder Gasoline Motor gives more power for the money than any other machine on the market. No valves, gears, etc., to get out of order. Jump start. Solid or reversing propeller. Marine or stationary outfit for all requirements up to 5 H. P. The Wonder Alternator is the only small combined Alternator and Direct Current Generator made. It is the newest, most useful and interesting electrical invention. Can be wound for any voltage up to 10. Weight 4½ lbs. Can be operated as a motor. Agents wanted. Write for circulars.

THE R. M. CORNWELL COMPANY - 406 S. Salina Street, SYRACUSE, N. Y.

Moving Picture Machines

Films, Stereopticons, Views.

If you contemplate going into the public entertainment business, write for catalogue No. 3, which gives information and prices of Moving Picture Machines, Films, Stereopticons and Views. We offer dependable apparatus and views only; no second-hand goods for sale. Send 10 cents in stamps to cover postage of 364 page catalogue.

SPECIAL ANNOUNCEMENT

To be published on July 1, 1905
A NEW PUBLICATION, entitled

American Homes and Gardens

(Successor to SCIENTIFIC AMERICAN
BUILDING MONTHLY)

THIS new monthly magazine will be much broader in
scope than its predecessor. It will have the word
"Home" for its keynote. The one to whom this word
has no meaning will have no interest in this new pub-
lication. It is the intention of the Editor to take the
reader with him to various parts of the country, and
show him how the better class of people live, whether
the house may have cost \$3,000 or \$50,000. Good taste is
perhaps, more necessary in the building and furnishing
of a house of small cost than in a mansion of importance.
The Editor will not leave you on the outer doorstep,
however, but will take you within, where you may see
how the house is furnished and decorated, and how the
owners live. Then you may have a walk through the
garden, and then to the summer house, where, perhaps,
the plan of the formal garden culminates.
There will be published articles on room decoration
and furnishing, showing how the furniture may be
arranged to produce the best effects, what pictures may
be hung, and what bric-a-brac, inherited from some
former mansion, may with advantage be discarded. In
short, the new publication is intended to be
OF INTEREST

to the one who has a home. To the one who has not a
home, but intends to have one. To the one who wishes
to improve his home and make it more attractive.
To the one who appreciates that the Garden and the
House should form part of an harmonious scheme.
Each issue will contain an article on some important
mansion, showing, if possible, various views of the ex-
terior, the interior, and the garden. Plans are published
with most of the residences shown.
The new publication will be issued monthly, and will
be somewhat smaller in page size than the "Building
Monthly," viz.: 10 1/2 x 14. It will have a handsome color-
ed cover. It will have about 50 pages each issue. Price,
25 cents each issue; \$3 a year.

SPECIAL OFFER TO READERS OF THE SCIENTIFIC AMERICAN.

To any one subscribing before July 1, 1905, the sub-
scription price will be \$2.50 for "American Homes and
Gardens" for one year from July 1, 1905, to July 1, 1906.
To any one subscribing after July 1, 1905, the subscrip-
tion price, without exception, will be \$3 a year.

Subscribe at once and obtain the most favorable terms.

FRANKLIN

You may make a costly error if you judge *Franklin*
cars by anything except what they will do.

They cannot be fairly judged by ordinary standards. Their en-
gineering is so far advanced and their entire design so superior
in correctness to that of other cars that everyone of the six
Franklin models does more than any other automobile of its
type and more than the average car of a much costlier type.

Our 12 H. P. Roadster shown below carries two people actually 40 miles
an hour. It is the only four-cylinder strictly runabout machine made in this
country and the finest and speediest ever built. It this car Whitman made
his famous record run from *San Francisco to New York* in the hottest summer
weather in less than 33 days; against the best previous record of 61 days
(made by a water-cooled car).

Our Light Touring Cars with rear or side entrance tonneaus—fixed or de-
tachable—shown above, costing \$1650 and \$1700, carry four or five people
faster, safer and more comfortably than the average heavy \$2000 touring car.
They have all its ability and strength without its complication, cumbrous-
ness and tremendous operating expense.

Our High-power Touring Cars shown above, costing \$2500 and \$3500, are
—on average American roads—the speediest, liveliest, safest, most pleas-
urable cars built anywhere at the price.

No sensible investigator now doubts the complete practicality of
Franklin air-cooling under all possible conditions; but some water-
cooled manufacturers are much dissatisfied about it, naturally.

If you want the facts, all the facts, and nothing but the facts, send
for our Catalogue and "Coast to Coast" booklet.

H. H. Franklin Mfg. Co., Syracuse, N.Y., M. A. L. A. M.

Jiu-Jitsu Instruction by President Roosevelt's Teacher

Mullins Stamped Steel Boats Can't Sink

Staunchly built of strong, rigid steel plates with air chambers in each end like a life boat, they are buoyant—strong—safe—
—speedy—as much better than a wooden boat as a steel greyhound is better than a wooden schooner. They don't leak—
crack—dry out—wear out or become waterlogged and can't sink because of the air chambers. All boats sold direct and
fully guaranteed.

Motor Boats, Row Boats, Hunting and Fishing Boats.
Mullins Steel Motor Boats are elegantly equipped, torpede stern motor boats—not row boats with motors in them.
Motor Boats, 16 foot, 1 1/2 h. p. \$135; 18 foot, 3 h. p. \$240. Row Boats \$20 up.
Catalogue of all styles sent on request.

The W. H. Mullins Co., (The Steel Boat Builders) 118 Franklin St., Salem, O.,
Member National Association of Engine and Boat Manufacturers.

The Brocksmith Dynamo Castings

EXPERIMENTAL ELECTRICAL OUTFITS from which the following
practical machines can be made: Dynamo or Motor (high or low volts); Gas Engine
Dynamo; Motor Dynamo; Booster; Single Phase A. C. Rectifier; Single
Phase A. C. Motor; Motor-Driven Self-Exciting A. C. Generator, etc. Parts are
interchangeable throughout. Can be purchased altogether or one piece at a time.
Bulletin B mailed free for the asking.

PARSELL & WEEDE. 129-131 West Thirty-first Street, New York, U. S. A.

Hercules Cement Stone Machine

Makes blocks perfectly water-proof. Every shape and kind of stone from 2 inches to 6 feet long, ornamental design, sills, coping, anything.

Tamps on the face of the mould using 2 to 1 of sand and cement for facing, rendering block impervious to water and 5 to 1 for backing, thus saving cement.

Hercules blocks cheaper than lumber, brick or stone—far more durable.

Making cement stone a new and very profitable industry. Small capital required, as one machine makes every kind of stone.
