

OLDSMOBILE

You see them wherever you go,
They go wherever you see them.

The Best Line of Light Cars ever
Placed on the Market.

OLDSMOBILE TOURING CAR
Price \$1,400

20 H. P., 2-Cylinder, Side Entrance.

This car was the sensation of the New York Automobile Show. It represents the highest perfection of automobile construction in its class.

OLDSMOBILE LIGHT TONNEAU CAR
Price \$950

Motor Equipment $5\frac{1}{2}$ x 6 in., 10 H. P. horizontal. Transmission all spur type. Two speeds, forward and reverse. Gasoline and water capacity 7 gallons. Honeycombed radiator. Tilting Steering Post.

OLDSMOBILE TOURING RUNABOUT
Price \$750

Motor 7 H. P. This car and the Light Tonneau are very popular through their successes of the past season.

OLDSMOBILE STANDARD RUNABOUT
Price \$650

This favorite curved front runabout is equipped with a new carburetor which gives a large increase of power with less fuel consumption.

OLDSMOBILE LIGHT DELIVERY CAR
Price \$1,000

10 H. P. Motor. Ample carrying capacity. Very convenient, handy and easily operated.

OLDSMOBILE HEAVY DELIVERY CAR
Price \$2,000

16 H. P., 2-Cylinder Motor. Very strongly built. Capable of withstanding the most exacting strain. Represents the highest type of commercial vehicle in its class.

Full specifications of any of these cars
gladly sent on request.

A TYPICAL AMERICAN FOUR-CYLINDER GASOLINE TOURING CAR MOTOR.

(Continued from page 57.)

the coils being visible. This engine has $4\frac{1}{2}$ x 5-inch cylinders, and, at a speed of 900 R. P. M., develops 30 horse-power. Both it and the transmission of the Buffum car are protected by a steel pan beneath. The finish of all the parts of the car is excellent, and the wheels, rear axle, and transmission are all mounted on imported, non-adjustable, ball bearings. The Buffum motor is one of the few American motors having both systems of ignition.

AN AMERICAN MOTOR SLEIGH.

One of the novelties at the recent Automobile Show was a motor sleigh invented by a Boston lawyer, and which has, we are informed, been thoroughly tested and driven at a speed of 15 miles an hour for four hours at a time. As can be seen from the illustrations on page 57, the sleigh body is mounted upon a suitable framework, carrying at the forward end a high-speed, air-cooled, gasoline motor. The first speed reduction is obtained through a large gear meshing with a pinion on the motor. A sprocket on the same shaft as this gear drives a three-throw crankshaft in the middle of the frame by means of a chain running over the large sprocket, *I*, thus reducing the speed still further. The cranks are connected through horizontal connecting rods, *R*, with three pushers, *P*, having at their lower ends spikes and knife blades for cutting into the ice and snow. These pusher rods are hung from slotted arms, which are suitably connected to peculiar-shaped cam disks, *K*, which cause them to rise into the position in which the right-hand pusher is seen in the rear view of the chassis during the return stroke. The pusher rods are provided with springs, which keep them fully extended, yet allow them to be raised in the slots of the arms just mentioned, should they meet with an obstacle in the road. A suitable friction clutch connects the motor to the counter-shaft when the machine is being driven. The sleigh is provided with two flat grooved plates pivoted on the ends of rods and shown at *BB* in the rear view of the chassis. These plates act as brakes when moved down against the ground. The sleigh is steered by moving the front runners in the same manner as the front wheels are moved on an automobile. The frame of the sleigh is supported on springs on the runners. The principle used for propelling this sleigh is much the same as that used on some of the original locomotives. The inventor claims that it is the correct one, as the pushers pack the snow and obtain a positive hold when traveling in soft snow or on ice. The use of toothed wheels for propelling a motor sleigh, it is claimed, has never been entirely successful. The motor used on the present model is of 4 horse-power. The stroke of the pushers is 16 inches, so that they move the sleigh forward 4 feet for every revolution of the three-throw crankshaft.

Greensand is a closely coherent clayey or sandy deposit, composed largely of the mineral glauconite—a hydrated silicate of iron and potassium. Owing to the presence of the latter element it is often employed as a fertilizer.

For many years Algiers has been one of the principal ports in the Mediterranean as a coaling station. The coaling trade at Algiers has steadily increased from the year 1885 to 1900, during which period it successively rose from 5,000 tons in 1890 to 244,000 tons in 1895, and to 290,000 tons in 1900. During the same time the coal trade at Gibraltar, which had risen to 562,000 tons in 1889, gradually decreased to 272,000 tons in 1895, to rise to 303,000 tons in 1900. Algiers supplied in 1902 for ships' bunkers 297,000 tons, and in 1903 she supplied 339,000 tons, whereas the amount supplied by Gibraltar fell to 167,000 tons, and finally to 123,000 tons.

JIU-JITSU

The Wonderful Japanese Method of Attack and Self-Defense

By which the WEAK defeat the STRONG, in one volume complete, by Capt. Harry H. Skinner, 12mo, cloth, nearly 100 photo-illustrations. By mail \$1.00

Jiu-Jitsu described with simple eloquence, enriched with many photographs from life. Handsomely printed.

—N. Y. American.
Jiu-Jitsu—Capt. Skinner gives clear, careful explanation of all the various positions.

—N. Y. World.
Capt. Skinner's book is a comprehensive work in letter press and pictures of this remarkable science.—Tribune.

The reading of this book is all that is necessary to make you a master of all the secrets of JIU-JITSU.

RADIUM AND RADIO-ACTIVITY

THE Scientific American Supplement has published the most complete information on the subject of Radium and Radio-Activity that has thus far appeared. The following articles, written by men who have played a prominent part in the discovery of the marvelous properties of Radium, should be read by every student of chemistry and physics:

- Radio-Activity and the Electron Theory.** By Sir William Crookes. Scientific American Supplement 1402.
- The Radio-Activity of Matter.** By Professor Henri Becquerel. Scientific American Supplement 1373.
- Some Properties of the Radio-Active Substances.** By Professor Henri Becquerel. Scientific American Supplement 1427.
- Production of Helium from Radium.** By Sir William Ramsay. Scientific American Supplement 1444.
- Thorium: A Radio-Active Substance with Therapeutical Possibilities.** By Dr. Samuel G. Tracy. Scientific American Supplement 1470.
- Radium in Medicine.** By Dr. Samuel G. Tracy. Scientific American Supplement 1455.
- A Résumé of Recent Special Studies of Radium and Radio-Activity.** Scientific American Supplements 1468, 1471, 1470.
- Radium and Radio-Activity.** By Professor E. Rutherford. This article, written by a man noted for his original research on radio-activity, describes interesting experiments with radium and is very fully illustrated. Scientific American Supplements 1502 and 1503.
- A Complete Manual of Radium Technology,** clearly explaining the methods of obtaining radium, conducting experiments with the substance and measuring its radio-active force, will be found in Scientific American Supplements 1475, 1476, 1477.

These Scientific American Supplements comprise what may well be considered an admirable text-book on the subject of Radio-Activity.

Price of Scientific American Supplements, 10 Cents by Mail for each number mentioned. Order through your newsdealer or from

PRACTICAL ARTICLES ON Experimental Electro-Chemistry

By N. MONROE HOPKINS, Ph.D.

Assistant Professor of Chemistry in the George Washington University, Washington, D. C.

ARE APPEARING IN THE

Scientific American Supplement

The articles are specially prepared for us. They describe simply and clearly experiments in electro-chemistry with easily constructed apparatus. Intelligible and lucid drawings and photographs accompany the articles. The entire series, when complete, will constitute a splendid manual of electro-chemistry.

The instruments described have been used by the author in making the experiments that we explain, so that every student may be assured of their operativeness. Thus far the articles have appeared in SCIENTIFIC AMERICAN SUPPLEMENTS 1509, 1511, 1513, 1515.

Each number of the SUPPLEMENT costs 10 cents by mail. Send us \$5.00 for a year's subscription and be sure to receive all the papers containing the articles.
