

VALVE FOR STEAM-ENGINES.—C. E. Lowe, Eufaula, Indian Ter. In the present patent the invention has reference to improvements in valves for steam-engines, the aim of the inventor being to provide a valve which will work with less friction than the ordinary slide-valve by doing away with stuffing-boxes and packing-glands for the valve-rod.

ENGINE.—G. H. COLLIER, Joplin, Mo. Mr. Collier's invention relates to a steam-engine having an oscillating piston arranged in a suitable chest or cylinder and joined by a connecting-rod with a crank-shaft, so as to rotate the shaft upon the oscillation of the piston. The chest is provided with feed and exhaust ports controlled by a slide or other valve driven from eccentrics on the crank-shaft.

Railways and Their Accessories.

FISH-BAR CLAMP.—W. S. WOOTTON, Roanoke, Va. This invention relates to means for securing fish bars or plates oppositely upon the webs of meeting track-rails of a railroad, so as to secure the rails aligned and together, and has for its object to provide a novel and practical device for the indicated purpose that is easily applied and that dispenses with screw-threaded bolts and nuts thereon as means for clamping the fish bars or plates in place on the track-rails.

IMPLEMENT FOR ADJUSTING FISH-PLATE CLAMPS.—W. S. WOOTTON, Roanoke, Va. The invention refers to means for adjusting a securing device on fish-plates that are therewith clamped upon the meeting ends of track-rails, holding them aligned, and has for its object more particularly to provide details of construction for an implement that is especially well adapted for adjusting the parts of a novel fish-bar clamp, the implement by its use enabling the fixture of the clamping device at a rail-joint in a convenient, speedy and reliable manner and facilitating removal of the fish-bar clamp as may be required.

CAR-WHEEL.—C. WIMMER, Hamilton, Canada. Mr. Wimmer's invention relates particularly to improvements in driving-wheels for locomotives, the object being to provide a wheel of novel construction so arranged as to have a comparatively large frictional bearing-surface lengthwise of a rail, thus reducing the danger of slipping to a minimum, and therefore causing a train to come to a quick stop upon setting the brakes and a quick and easy start.

LOCK FOR RAILWAY-SWITCHES.—D. BOYLE, Livingston, Mont. In the present patent the invention has reference to locks for railway-switches, and the inventor has for his particular object the provision of a secure device convenient to operate which will not be liable to become disarranged even if the associated switch-stand be overturned.

CAR-COUPLING.—J. MCWATERS, St. Augustine, Fla. The object in this case is to provide details of construction for a coupling which will be very effective and reliable in service, convenient to operate, of compact construction, and which will positively release a car-coupling of the Janney type, whether of the improved or ordinary construction, when the car having the improved coupling thereon leaves the track from any cause and drops below the track-rails or the car in advance is derailed and its coupling is lowered.

CAR-COUPLING.—C. C. WERTHNER, Toronto, Canada. The purpose here is to provide a self-locking coupler adapted for either freight or passenger service and to so construct the coupler that uncoupling may be instantly and rapidly accomplished and whereby when two opposing draw-heads are brought together they will have a locking engagement, yet each draw-head and its draw-bar will be free to accommodate themselves to any curve, ascension, or declivity in the track.

Designs.

DESIGN FOR AN INCANDESCENT LAMP.—A. H. SEILING, New York, N. Y. This design for an incandescent lamp is graceful and ornamental. The lamp is provided with a conical illuminating surface corrugated so as to form a series of lines which converge at an apex and thus presents a maximum of illuminating surface. In form, the glass portion resembles the outline of a top.

DESIGN FOR FRINGE.—J. C. ATKINSON, New York, N. Y. This ornamental design for fringe comprises a band of linen or like threads, the threads producing a bright and checkered effect and studded with woven bows of unvarying size. Below the band the threads hang in graduated lengths to produce a scalloped form of edge. Mr. Atkinson has designed another ornamental fringe of like material as the above and consisting of a band with open work center. Below the band the threads hang in skein form of uniform length.

DESIGN FOR TRIMMING.—C. SEIDEL, New York, N. Y. This new and ornamental design for a trimming comprises a straight edged band of linen or like material. The body has a plain cross thread effect and irregularly spaced with stripes of different widths and two patterned rows, and forming a very chaste and attractive composition.

NOTE.—Copies of any of these patents will be furnished by Munn & Co. for ten cents each. Please state the name of the patentee, title of the invention, and date of this paper.

Business and Personal Wants.

READ THIS COLUMN CAREFULLY.—You will find inquiries for certain classes of articles numbered in consecutive order. If you manufacture these goods write us at once and we will send you the name and address of the party desiring them. In every case it is necessary to give the number of the inquiry.

MUNN & CO.

Marine Iron Works. Chicago. Catalogue free.

Inquiry No. 6463.—For manufacturer of Flaherty Carboy Inclinator.

For mining engines. J. S. Mundy, Newark, N. J.

Inquiry No. 6464.—For manufacturer of suspender web, buckles, cord, etc., in large quantities; also a firm who would make a suspender on contract.

"C. S." Metal Polish. Indianapolis. Samples free.

Inquiry No. 6465.—Address of two or three firms dealing in small engines of one or two horse power.

Perforated Metals, Harrington & King Perforating Co., Chicago.

Inquiry No. 6466.—For manufacturer of cardboard rolls similar to those used for mailing periodicals, etc., also cardboard roll 5 in. long, $\frac{3}{8}$ in. in diameter and $\frac{1}{8}$ in. wall.

Handle & Spoke Mch. Ober Mfg. Co., 10 Bell St., Chagrin Falls, O.

Inquiry No. 6467.—Address of manufacturers of a mill that will pulverize from 5 to 10 tons of hay or straw per day.

Adding, multiplying and dividing machine, all in one. Felt & Tarrant Mfg. Co., Chicago.

Inquiry No. 6468.—Address of people selling spool and bobbin machinery.

Sawmill machinery and outfits manufactured by the Lane Mfg. Co., Box 13, Montpelier, Vt.

Inquiry No. 6469.—For manufacturer of machine that will take out the artificial target used by trap shooters and known as Blue Rocks, Black Birds.

Robert W. Hunt & Co. bureau of consultation, chemical and physical tests and inspection. The Rookery, Chicago.

Inquiry No. 6470.—For the manufacturer of collapsible hard tubes with screw cap suitable to put up ointment.

The celebrated "Hornby-Akroyd" Patent Safety Oil Engine is built by the De La Vergne Machine Company Foot of East 138th Street, New York.

Inquiry No. 6471.—For the manufacturer of mortising chisel, to use in a mortising machine, which removes the core, in making blind tenon doors, sash, etc.

I have every facility for manufacturing and marketing hardware and housefurnishing specialties. Wm. McDonald, 190 Main St., East Rochester, N. Y.

Inquiry No. 6472.—For the address of a firm who can supply a gasoline furnace adapted for heating bars of iron $\frac{1}{2}$ x 1 x 48 inches.

The SCIENTIFIC AMERICAN SUPPLEMENT is publishing a practical series of illustrated articles on experimental electro-chemistry by N. Monroe Hopkins.

Inquiry No. 6473.—For the address of parties manufacturing machine for forming beaded bars into a helical form, like the blades of a lawn mower.

Sheet metal, any kind, cut, formed any shape. Die making, wire forming, embossing, lettering, stamping, punching. Metal Stamping Co., Niagara Falls, N. Y.

Inquiry No. 6474.—For the manufacturer of advertising novelties, especially woolen and celluloid rulers.

We manufacture gasoline motor and high-grade machinery, castings best quality gray iron. Select patterns, and let us quote prices. Frontier Iron Works, Buffalo, N. Y.

Inquiry No. 6475.—For importers of German and French mechanical toys, metal goods and novelties.

Manufacturers of patent articles, dies, metal stamping, screw machine work, hardware specialties, machinery and tools. Quadriga Manufacturing Company, 18 South Canal Street, Chicago.

Inquiry No. 6476.—For the manufacturer of machine used by the makers of felt roofing.

CALCULATING MACHINES.—Wanted, first-class firm willing to take up the agency and sale in the United States and Canada of a well-known calculating machine. Terms very favorable. Apply Grimme, Natalis & Co., Braunschweig, Germany.

Inquiry No. 6477.—For the manufacturer of typewriters, metal office furniture, typewriter ribbons, carbon papers, safes, sporting goods, canvas, car curtains, bookcases and office furniture.

WANTED.—General Factory Superintendent or Agent. Competent to take charge of large manufacturing plant. All correspondence strictly confidential. Address with full particulars as to experience and qualifications Superintendent. Box 773, New York.

Inquiry No. 6478.—For firms supplying bathroom outfits, a gasoline engine for pumping the water and an electric light outfit for about a dozen lights.

WANTED.—Revolutionary Documents, Autograph Letters Journals, Prints, Washington Portraits, Early American Illustrated Magazines, Early Patents signed by Presidents of the United States. Valentine's Manuals of the early 40's. Correspondence solicited. Address C. A. M., Box 773, New York.

Inquiry No. 6479.—For the manufacturer of small or portable furnace (oil burner preferred) for smelting iron ore.

MANUFACTURERS OF NOVELTIES AND DEALERS. WANTED to purchase up-to-date novelties suitable for mail order business.

The Agents Novelty Co.

89 Court St., Room 2,
Boston, Mass.

Inquiry No. 6480.—For manufacturers of desiccating machines.

Inquiry No. 6481.—For manufacturers of refrigerators 15 feet in length.

Inquiry No. 6482.—Wanted, catalogues of goods for export.

Inquiry No. 6483.—For parties dealing in collapsible tin or lead tubes with screw caps, such as are used to put up Winsor & Newton oil colors, Carter's and other pastes, blackings, etc.

Inquiry No. 6484.—Name and address of good glass worker to make a bent glass tube of special design.

Inquiry No. 6485.—For manufacturers of air hose, open blast, carpet and furniture tools, air hose connections and a small pressure blower.

Inquiry No. 6486.—Address of embroidery machine makers for simple pattern work, lockstitch principle (zig-zag or otherwise).

Inquiry No. 6487.—For manufacturer of $\frac{1}{2}$ h. p. gasoline engines, water motors which can be tapped and water pipe in cellar like a meter without stopping the flow of water.

Inquiry No. 6488.—Address of firms handling new scientific toys, such as can be used in illustrating principles in Physics in an interesting way.

Inquiry No. 6489.—Address of parties handling violin maker's tools.

HINTS TO CORRESPONDENTS.

Names and Address must accompany all letters or no attention will be paid thereto. This is for our information and not for publication. References to former articles or answers should give date of paper and page or number of question. Inquiries not answered in reasonable time should be repeated: correspondents will bear in mind that some answers require not a little research, and though we endeavor to reply to all either by letter or in this department, each must take his turn.

Buyers wishing to purchase any article not advertised in our columns will be furnished with addresses of houses manufacturing or carrying the same.

Special Written Information on matters of personal rather than general interest cannot be expected without remuneration.

Scientific American Supplements referred to may be had at the office. Price 10 cents each.

Books referred to promptly supplied on receipt of price. Minerals sent for examination should be distinctly marked or labeled.

(9528) M. L. T. asks: 1. In the so-called "Highlow" lamp, is the small loop of filament which is used for the small candle-power of a greater resistance than the large one? If so, what is its resistance in comparison with the large one? A. We do not know the resistance of the filaments of the "Highlow" lamp, but the resistance of the side which gives the least light must be much greater than that of the side which gives the brighter light. 2. Is a silk watch chain any protection to a watch from its being magnetized when being carried in the pocket? The first person claims that he wears a silk watch chain while working about a machine (which by the way is a 150-kilowatt rotary converter, 550 volts direct current) so that if it should hit the field casting, his watch would not receive the magnetism by its traversing the chain as it would if it were gold. I claim that the material of the chain would not affect the watch becoming magnetized, but if brought near enough to the machine, the watch would receive the magnetism, even if it were in the pocket. I have always read that magnetism had no insulator: according to this, I believe the silk chain to be no protection from magnetism. Will you please state your opinion of this? A. Your friend and yourself seem to be a little mixed in reference to magnetism, silk watch chains, etc. You are right that magnetism passes through space. It has no insulator, excepting iron. It does not traverse a wire at all. It whirls around a wire in which a current of electricity is flowing, and causes the current to move a magnetic needle, and thus makes voltmeters and ammeters possible. Silk on the other hand is an insulator of electricity, not of magnetism. Electricity cannot get off a wire covered with silk. Gold is a conductor of electricity, and if a gold watch chain touched any uninsulated metal which was carrying a current, a man who might touch the chain in that position would receive a shock. If such a chain should touch the field casting only, nothing could happen, since the field casting is not carrying a current of electricity, but is only magnetized.

(9529) J. A. H. asks: Will you kindly explain how voltmeters and ammeters can be read to 1-10 their divisions? A. A scale is usually read to a tenth of a division by estimating the fractional part in tenths with the eye. This is of course not accurate, but the best that can ordinarily be done. The error, with experience, need not exceed a tenth. Sometimes voltmeters and ammeters are provided with shunts, which change the value of a division of the scale. Thus you can have a shunt made which will make one division have one-tenth of its present value. This will be much better than to estimate by the eye the fractional part of a division indicated by the pointer.

NEW BOOKS, ETC.

THE BIBLE IN PRACTICAL LIFE. Being the Proceedings of the Second Annual Convention of the Religious Education Association, held in Philadelphia, Pa., March 2 and 4, 1904. Chicago: Executive Office of the Association, 1904. 8vo.; pp. 640.

The papers contained in this volume cover very completely the subject in hand. Many of them are by leaders in the religious thought of the country, and the information contained in the lectures will be found invaluable to all who have to do with the teaching and studying of the Bible.

THE NATURE OF THE STATE. By Dr. Paul Carus. Chicago: The Open Court Publishing Company, 1904. 12mo.; pp. 52. Price, 15 cents.

Dr. Carus is the author of a long list of works on religion and ethics. Seven papers are here presented dealing with the evolution of the state, its present condition and standing, its rights and its limitations.

CRANIO-MUSCULAR ORIGINS OF BRAIN AND MIND. By Philip H. Erb. Chicago: Promethean Publisher, no date. 16mo.; pp. 240. Price, \$1.20.

The author is well known in his special line,

and he pretends to no exhaustive treatment of the evolutionary origins of brain and mind. The author believes that it is only by conforming to reality, visible and invisible, that we can ever hope to place life and conduct upon a sound basis. The entire book is avowedly committed to carrying the law of evolution to the limit.

THE TELEPHONE SERVICE. Its Past, Its Present, and Its Future. By Herbert Laws Webb, M.I.E.E. London and New York: Whittaker & Co., 1904. 16mo.; pp. 118. Price, 40 cents.

The author is a well-known electrical engineer, and it has been his endeavor to describe in plain language the general features of a modern city telephone system, and the principles which govern the cost of production of the telephone service. The difficulties which arise in the working of the service are many, and this is chiefly responsible for the acrimony with which complaints against the telephone service are usually tinged. These discussions are, in many cases, marred by lack of knowledge on the part of the participants, not alone of the technical details, but of the fundamental principles of an extremely technical industry. It has been the aim of the author to try and convey intelligently to the lay mind the broad principles which underlie the telephone service, and in this he has succeeded most admirably.

LE TURBINE A VAPEUR ED A GAS. By Giuseppe Belluzzo. Milan: U. Hoepli, 1905. 8vo.; pp. 413. Price, \$2.50.

The author of this Italian treatise on turbines shows a remarkable familiarity with both the theory and practice of turbine engineering. He shows an excellent knowledge of the mathematical phase of the subject, and we doubt if there is any treatise in English which in any way approximates this work. We hope that it may soon be translated and given to English-speaking readers.

BUSINESS SHORT CUTS IN ACCOUNTING. BOOK-KEEPING, CARD-INDEXING, ADVERTISING, CORRESPONDENCE, MANAGEMENT. Detroit: The Book-Keeper Publishing Company, Ltd., 1904. 18mo.; pp. 157. Price, \$1.

In the present volume we find short cuts in figures, calculations, accounting, advertising, correspondence, bookkeeping, filing, credits, collections, selling methods, etc. The expert systematizer is in greater demand than any other business expert. His is the most lucrative of the newest of all professions. He is welcome wherever he goes, and his large fees are seldom begrudged, because in the end he is a money-saver of large caliber. The present book is filled with admirable suggestions, which might be adopted with success by many concerns. The book has been arranged by the board of experts of the Book-Keeper and Business Magazine of Detroit, Mich.

THE NAVAL POCKETBOOK. By Sir W. Laird Clowes. London: W. Thacker & Co., 1904. Pocketbook size; 972 pp. Price, \$3 net.

This little work is always welcome, and it divides the honors with the more pretentious books of Jane and Brassey. Special attention has been given to the submarine boats of the world. The notes on torpedoes are also interesting. The list of drydocks is most comprehensive, and the trial trip tables will certainly be of use to all who are in any way engaged in conducting such tests. The illustrations are numerous and accurate. The book is one that we can recommend as a concise compendium of naval matters.

THE FOUNDATION OF ALL REFORM. A Guide to Health, Wealth, and Freedom. By Otto Carque. Chicago: Kosmos Publishing Company, no date. 18mo.; pp. 76. Price, 50 cents.

The present volume advocates the superiority of the fruitarian diet, and the book will undoubtedly prove of interest to those who are in favor of this diet.

INDEX OF INVENTIONS

For which Letters Patent of the

United States were Issued

for the Week Ending

January 24, 1905

AND EACH BEARING THAT DATE

[See note at end of list about copies of these patents.]

Adding and subtracting machine, M. E. Anderson	780,853

Valuable Books

REVISED and ENLARGED EDITION
The Scientific American
Of Receipts, Notes and Queries.
Cyclopedia
15,000 Receipts. 734 Pages.
Price, \$5.00 in Cloth. \$6.00 in Sheep. \$6.50 in Half Morocco. Post Free.

This work has been revised and enlarged,
900 New Formulas.
The work is so arranged as to be of use not only to the specialist, but to the general reader. It should have a place in every home and workshop. A circular containing full Table of Contents will be sent on application. Those who already have the Cyclopedia may obtain the
1901 APPENDIX.
Price, bound in cloth, \$1.00 postpaid.

Home Mechanics for Amateurs

This book has achieved an unparalleled success in one week, and a Special Edition of 4,000 copies has been ordered. It is by far the largest and best book on the subject ever offered at such a low price. It tells how to make things the right way—the "only" way—at small expense. It will prove of value to you much more than you realize. Do things with your hands. Send for a circular giving contents—the circulars cost only a cent—the book \$1.50 postpaid. If the book could meet you face to face you would be the first to purchase. The first large edition is almost gone, order to-day.

370 Pages 326 Engravings Price \$1.50

TWENTY-THIRD EDITION EXPERIMENTAL SCIENCE.

By GEORGE H. HOPKINS
Revised and Greatly Enlarged. 2 Octavo Volumes. 1,100 Pages. 900 Illustrations. Cloth Bound, Postpaid, \$5.00. Half Morocco, Postpaid, \$7.00. Or Volumes Sold Separately: Cloth, \$3.00 per Volume; Half Morocco, \$4.00 per Volume.

EXPERIMENTAL SCIENCE is so well known to many of our readers that it is hardly necessary now to give a description of this work. Mr. Hopkins decided some months ago that it would be necessary to prepare a new edition of this work in order that the many wonderful discoveries of modern times might be fully described in its pages. Since the last edition was published, wonderful developments in wireless telegraphy, for example, have been made. It was necessary, therefore, that a good deal of new matter should be added to the work in order to make it thoroughly up-to-date, and with this object in view some 200 pages have been added. On account of the increased size of the work, it has been necessary to divide it into two volumes handsomely bound in buckram.

Practical Pointers For Patentees

Containing Valuable Information and Advice on
THE SALE OF PATENTS.
An Elucidation of the Best Methods Employed by the Most Successful Inventors in Handling Their Inventions
By F. A. CRESEE, M. E.
144 Pages. Cloth. Price, \$1.00.

JUST PUBLISHED Scientific American Reference Book

12mo. 516 Pages. Illustrated. 6 Colored Plates. Price \$1.50, postpaid
The result of the queries of three generations of readers and correspondents is crystallized in this book, which has been in course of preparation for months. It is indispensable to every family and business man. It deals with matters of interest to everybody. The book contains 50,000 facts, and is much more complete and more exhaustive than anything of the kind which has ever been attempted. The "Scientific American Reference Book" has been compiled after gauging the known wants of thousands. It has been revised by eminent statisticians. Information has been drawn from over one ton of Government reports alone. It is a book of everyday reference—more useful than an encyclopedia, because you will find what you want in an instant in a more condensed form. Sixty years of experience alone have made it possible for the publishers of the SCIENTIFIC AMERICAN to present to the purchasers of this book a remarkable aggregation of information.

PRACTICAL ARTICLES ON Experimental Electro-Chemistry

By N. MONROE HOPKINS, Ph.D.

Assistant Professor of Chemistry in the George Washington University, Washington, D. C.

ARE APPEARING IN THE

Scientific American Supplement

The articles are specially prepared for us. They describe simply and clearly experiments in electro-chemistry with easily constructed apparatus. Intelligible and lucid drawings and photographs accompany the articles. The entire series, when complete, will constitute a splendid manual of electro-chemistry.

The instruments described have been used by the author in making the experiments that we explain, so that every student may be assured of their operativeness. Thus far the articles have appeared in SCIENTIFIC AMERICAN SUPPLEMENTS 1509, 1511, 1513, 1515, 1517.

Each number of the SUPPLEMENT costs 10 cents by mail. Send us \$5.00 for a year's subscription and be sure to receive all the papers containing the articles.

BRENNAN MOTOR CO., Syracuse, N. Y.

Gentlemen:—The 14 H. P. motor which we purchased of you last January we have in a car that weighs 1,850 pounds. Car has been driven 4,000 miles and the motor has given excellent results and drives the car 40 miles an hour. We made the run from Syracuse to Utica in 2 hours and 20 minutes. Total time from Syracuse to Albany 8 hours; time from Boston to Syracuse 20 hours.

The car weighed with two passengers and luggage 2,350 pounds. We also wish to say that after using several makes of carburetors we obtained the best results from your carburetor.

Yours truly,

The Right Kind of a Motor

THE LIGHT THAT CANNOT FAIL! THE GREATEST INVENTION OF THE AGE THE CENTURY LIGHT

which is owned and controlled by the Century Light Company of America, under letters patent, organized under the laws of the Commonwealth of Massachusetts with a capitalization of \$500,000, par value of shares \$5.00 each fully paid and non-assessable. **INVESTORS SHOULD CONSIDER :-**

This Light produces from a single burner, 500 candle power from ordinary city gas for one cent per hour.

The Century Light, although in tensely brilliant, is soft and mellow and light in color.

It is the only system of gaslighting that comes in direct competition with the arc electric at one-tenth the cost.

It is absolutely safe under any and all conditions.

Its great value has been demonstrated in actual practice for more than a year, and is recommended in the highest terms by well-known people.

It is fully protected by Patents in the United States, Canada and Great Britain.

It can be installed in cities, towns, stores, churches, theatres, dwellings, etc., and utilized for street lighting.

A limited number of shares for immediate sale at \$2.50 per share, or 50% of the par value.

There is an absolute guarantee against loss in this investment. Write for all particulars to

The Science of the LINDSAY LIGHT

Here it is, so plainly illustrated that anyone can readily see why the Lindsay Light produces more light and better light from a less amount of gas than would be burned in the same time by an ordinary incandescent gas burner.

Note the taper tube burner; the heated air chamber; the air draft which heats the gas before it strikes the flame, causing perfect combustion.

The Lindsay Light gives a forced pressure that sends the flame clear out to the end of the mantle, making it all incandescent—all light giving. It regulates the pressure of any gas system, allowing no waste from over pressure. The Lindsay Light mantle gives out a strong, white, brilliant light of 800 candle power.

In two months and six days one Lindsay Light will save its cost in gas.

Best dealer everywhere sell them. If not obtainable at dealers, send prepaid \$1.25. The installation of Lindsay Lights will not only save money, but eyesight, as the light is so soft and restful. Write for FREE Illustrated Book and Full Particulars.

LINDSAY LIGHT COMPANY CHICAGO

\$3,000 A YEAR

is not an unusual salary for an electrician—many earn much more. We can teach any man electricity. Have proved it. We can qualify you for a good position before you realize it. By our method of correspondence instruction beginners in the electrical field can commence work at a better salary than if they started without training. Write and ask how.

Just think! We offer to show you free of charge how you can positively earn a good salary and make a place in the world for yourself. Isn't it worth asking about? Write to-day and know tomorrow how to become an electrician.

GOVERNMENT OF BERMUDA.

Tenders for Deepening, Widening and Buoying St. George's Channel.

The Crown Agents for the Colonies, London, England, are prepared on behalf of the Government of Bermuda to receive tenders for the deepening, widening and buoying of the Channel leading from sea into St. George's Harbour in the Islands of Bermuda.

The Channel has been surveyed by persons appointed by the Government of Bermuda, and on and after the 9th of January, 1905, a plan, drawing, sections, form of contract and form of tender may be seen daily by intending contractors at the office of the British Consul-General, 17 State Street, between the hours of 11 A. M. and 3 P. M.

On application to the Consul-General and on payment of 20 pounds, persons or firms wishing to submit a tender will receive two copies of the form of contract and form of tender and will be allowed to make copies of the plan, drawings and sections showing the work to be executed under the contract. The above sum will be returned to each person or firm submitting a bona fide tender properly completed in all respects within the time specified below.

Tenders on the form attached to the form of contract must be delivered to the Crown Agents for the Colonies, Whitehall Gardens, London, S.W., not later than noon on Monday the 10th day of April, 1905, in sealed envelopes endorsed "Tender for deepening, widening and buoying St. George's Channel, Bermuda." The draft form of contract and schedule of prices must be sent in with the tender with the blanks in each properly filled in as required by the form of tender.

One of the conditions of the tender is that it must remain open and may be accepted at any time within six months.

The Crown Agents do not bind themselves to accept on behalf of the Government of Bermuda the lowest or any tender, nor will they assign any reason for the rejection of a tender.

The tenders will be communicated to the House of Assembly of Bermuda. The carrying out of the proposed works will depend mainly upon whether after the tenders have been submitted to the Legislature of Bermuda the Legislature decide to proceed with the works.

John Burroughs, in his introduction to

The Nature Library

says: "To add to the resources of one's life—think how much that means! To add to those things that make us more at home in the world; that help guard us against ennui and stagnation; that invest the country with new interest and enticement; that make every walk in the fields or woods an excursion into a land of unexhausted treasures; that make the returning seasons fill us with expectation and delight; that make every rod of ground like the page of a book, in which new and strange things may be read; in short those things that help keep us fresh and sane and young, and make us immune to the strife and fever of the world." These are the words of the "Nature Poet," and admirably do they express what the ten superb volumes of The Nature Library do for their possessors. Every day adds largely to the number of homes, schools, and libraries now possessing the work, and each new owner becomes a more enthusiastic learner in Nature's School.

You will be interested in our descriptive booklet. May we send you one of them, with particulars of our present offer?

Incubators and Brooders

Send for Descriptive Catalogue.

CHAS. A. CYPHERS
3944 Henry St. BUFFALO, N.Y.

BIG PROFITS IN POULTRY.
A city lot is large enough, and the

CYPHERS INCUBATOR
makes hatching certain. Used on and endorsed by 42 Government Experiment Stations. Complete catalog and poultry guide, 212 pages 6x11 inches, free if you mention this paper. Address nearest office.

Cyphers Incubator Co., Buffalo, N. Y.
Boston, Chicago, New York, Kansas City, San Francisco

SHOEMAKER'S BOOK on POULTRY

and almanac for 1905, contains 224 pages, with many fine colored plates of how to raise life. Tells all about chickens, their care, diseases and remedies. All about INCUBATORS and how to operate them. All about poultry houses and how to build them. It's really an encyclopedia of chicken-dom. You need it! Price only 15c.

C. C. SHOEMAKER, Box 800, FREEPORT, ILL.

GLOBE INCUBATORS.

Hatch chickens. No experience necessary. See large 200 page illustrated Catalogue of Incubators and Brooders and Poultry Information mailed free. Address,

C. C. SHOEMAKER,
Box 1021, Freeport, Ill.

You BUILD IT YOURSELF

Can We tell you how to do it, show views of machines built at home and many letters from satisfied customers in our new book "How to Make and Save Money with Incubators and Brooders." Full of good things. Invaluable to the beginner. You save half the cost of your incubator. None hatch better. Get the Book and know for yourself.

Channon, Snow & Co., Dept. 196, Quincy, Ill.

RUBBER STAMP MAKING.—THIS article describes a simple method of making rubber stamps with inexpensive apparatus. A thoroughly practical article written by an amateur who has had experience in rubber stamp making. One illustration. Contained in SUPPLEMENT 1110. Price 10 cents. For sale by Munn & Co. and all newsdealers.

Ferry's Seeds

are known by what they have grown. For half a century they have been the standard—haven't failed once to produce bigger, better crops than any others. Sold by all dealers. 1905 Seed Annual free to all applicants.

D. M. FERRY & CO.,
Detroit, Mich.

Hydrozone

Cures Sore Throat

A Harmless Antiseptic.

Endorsed by the medical profession. Send ten cents to pay postage on free trial bottle. Sold by Leading Druggists. Not genuine unless label bears my signature:

Prof. Charles H. Harkness

Dept. U. 63 Prince St., N. Y.

Write for free booklet on Rational Treatment of Disease.

HOW TO MAKE AN ELECTRICAL FURNACE for Amateur's Use.—The utilization of 110 volt electric circuits for small furnace work. By N. Monroe Hopkins. This valuable article is accompanied by detailed working drawings on a large scale, and the furnace can be made by any amateur who is versed in the use of tools. This article is contained in SCIENTIFIC AMERICAN SUPPLEMENT, No. 1182. Price 10 cents. For sale by MUNN & Co., 361 Broadway, New York City, or by any bookseller or newsdealer.

Spangenberg's Steam & Electrical Engineering

Price \$3.50

By E. SPANGENBERG, M.E., formerly Superintendent St. Louis School of Engineering. ALBERT UHL, A.L.E.E., and E. W. PRATT, 672 pages, 648 illustrations. Only work containing 1255 Questions and Answers on every branch of engineering. **Easy to Understand** Written by practical men for practical men in easy and simple style. Treats of Gas and Gasoline Engines, Stationary and Locomotive Engineering, Compressed Air, Refrigeration, Hydraulic Elevators, and has 240 Pages on Electricity. Agents wanted everywhere. GEO. A. ZELLER, Publisher, 68 S. 4th St., St. Louis, Mo. 40-page pamphlet tells all about it.

THOUSANDS are successful and gaining better positions and salaries studying **Electrical Engineering, Steam Engineering, Mechanical Engineering, Mechanical Drawing, Electric Motorman's Course, Dynamo Tender's Course, Telegraphy, Short Electrical Course, Arithmetic, Algebra, by mail.** Thomas A. Edison endorses Institute. Text books free. Students helped to positions. Write for free book, "Can I Become An Electrical Engineer?" **ELECTRICAL ENGINEER INSTITUTE** Dept. A, 240 West 28th St., New York

Complete Electric Lighting Plant

Price, \$34.00

Dynamo only, for eight 16-c.p. lamps, \$26.00; lamps, wire, fixtures, etc., \$8.00; just suitable for residences, small factories, yachts, etc. A strictly first-class guaranteed outfit. We want for any special purpose to order, usually without extra cost. Send for Bulletin No. 3. **The Elbridge Electric Mfg. Co.,** Water Street, Elbridge, N. Y., U. S. A.

Electrical Engineering

and Experimental Work of Every Description

We have every facility for producing first-class work promptly. Our factory is equipped with modern machinery throughout.

C. F. SPLITDORF Engineering Dept. 17-27 Vandewater St., N. Y. City

ELECTRIC SEWING MACHINE MOTOR.—The instructions and numerous illustrations of details contained in this article will enable any mechanic of average ability to build an efficient motor that will operate a sewing machine. The cost of materials for this machine should not exceed five dollars. See SCIENTIFIC AMERICAN SUPPLEMENT, No. 1210. Price 10 cents by mail, from this office and from all newsdealers.

69 CENTS FLASH LIGHT

Postage extra, etc. The best made; lasts the longest; gives most powerful light. It's always ready—simply press the button. Extra batteries, etc. each. Agents make big money. Send for catalogue. **THE VITA CO.,** 85 E. Lake St., Chicago.

The Atwater Kent Switch

Neat and Sensible. No keys to be lost. Anyone wishing to steal an automobile will not allow the switch to prevent them. The lever is provided with notches to keep it in the position placed, and the handle is large enough to be operated by a heavily gloved hand. Poor connections are avoided by first fastening the switch into place and then adjusting the wires from the front, by removing the name plate.

Price \$2.00 each.

THE WEALTH Patents Patents OF NATIONS

A **PATENT GIVES** you an exclusive right to your invention for a term of seventeen years. You can sell, lease, mortgage it, assign portions of it, and grant licenses to manufacture under it. Our Patent system is responsible for much of our industrial progress and our success in competing in the markets of the world. The value of a successful Patent is in no degree commensurate with the almost nominal cost of obtaining it. In order to obtain a Patent it is necessary to employ a Patent Attorney to prepare the specifications and draw the claims. This is a special branch of the legal profession which can only be conducted successfully by experts. For nearly sixty years we have acted as solicitors for thousands of clients in all parts of the world. Our vast experience enables us to prepare and prosecute Patent cases and Trade Marks at a minimum of expense. Our work is of one quality and the rates are the same to rich and poor. Our unbiased opinion freely given. We are happy to consult with you in person or by letter as to the probable patentability of your invention.
