RECENTLY PATENTED INVENTIONS.

Of General Interest.

HEADWEAR.—J. U. ADAMS, New Orleans, La. This invention has reference more especially to hats, caps, and the like of the types embodying a sweat-band; and one of the principal objects is to provide the sweat-band of the article with means for enabling the same to be loosened (expanded) or tightened (contracted) within certain limits to thereby adapt the article to fit the head of the wearer thereof.

PAPER-LIFTING DEVICE FOR PAPER-ROLLS.—E. S. BROWN, Washington, D. C. The parts are so arranged that the device may be readily secured to any of the ordinary frames now in common use, it being preferred to place the bracket with its stop or lug against the front edge of the top bar of the frame and to secure the said bracket by screws passing through its top plate. This facilitates the application of the improvement to devices already in use and also enables its ready connection with the frames in course of manufacturing the same.

DOOR CHECK AND CLOSER.—G. T. SHEETS, Salt Lake City, Utah. The object in this instance is to provide a device with special means for regulating the action of the dash-pot and for facilitating the disconnection of the device from the door. Arrangement is made for regulating the tension of the spring which is used in connection with the closer and for attaching the device for operation with or without the dash-pot.

Household Utilities.

FURNITURE.—G. H. ABERCROMBIE, Poughkeepsie, N. Y. The invention relates particularly to combined screens and washstands, the object being to provide a device particularly adapted for use in small rooms or where furniture-space is limited, the device being so constructed that the shelving and other parts will fold closely against the screen convenient for storage or placing closely against a wall.

COOKING UTENSIL.—R. A. W. KRAMPITZ, Valdez, Alaska. In this invention the improvement is in culinary utensils especially designed for use in camping-outfits and the like, but which may be employed whenever desired. The utensil comprises three different camp utensils—one a mixing-pan for mixing bread, etc., a bread-pan in which biscuits and other bread may be baked, and a frying-pan which may co-operate with the mixing-pan and bread-pan.

VENTILATOR.—H. L. MORRILL, Monticello, Maine. In practical use this ventilator is in-

serted in the corner of a window-pane, a triangular section of glass being removed for reception thereof. The edge of the glass rests against the flange and is maintained in contact therewith by means of the cover on the opposite side. By manipulating the latch on the cover the same may be adjusted to give any desired degree of opening, or the opening may be entirely closed.

Machines and Mechanical Devices.

PRINTING MECHANISM FOR WARP-PRINTING DEVICES.—F. SCHMIDT, 7 Edisonstrasse, Oberschöneweide, near Berlin, Germany. Besides the advantage of using thin liquid color this apparatus offers many others. Printing can be done much quicker than with the old apparatus as lifts or throws are very light. As when printing the drum can make no lateral movements, printing-strips become sharply defined. Much time is saved, engagement being effected by simple movement of a lever. As the color-boxes may be situated on the endless chain below the printing device—the warp-printing drum—and do not require to change position, they do not stop the work and cannot be so easily mistaken one for the other as formerly. Fewer assistants are required for this new apparatus.

NOTE.—Copies of any of these patents will be furnished by Munn & Co. for ten cents each. Please state the name of the patentee, title of the invention, and date of this paper.
