What Your Closet Should Be TO BE SAFE

Book on Household Health sent free, if you mention the name of your Plumber.

A closet should be first of all, free from the odors caused by imperfect cleansing or shallow water seal, permitting escape of sewer gas.

It should be of perfect construction, and not of material subject to rust, corrosion, under-surface discoloration, or cracked and chipped surface enamel, such as porcelain enameled iron.

If your closet shows any one of the faults mentioned, you are exposed to a direct and dangerous menace to health. If examination or past experience shows your closet to be defective, replace it with the perfect sanitation embodied in

The Closet of Health

Unlike the ordinary closet, the "SY-CLO" has a double cleansing action, a combination of flush from above and a powerful pump like *siphon* from below. The downward rush of water creates a vacuum into which the entire contents of the bowl is drawn with irresistible syphonic force.

The material of the SY-CLO Closet is heavy white china, hand moulded into a single piece without joint or seam; its surface cannot chip off nor crack, and is unaffected by acid, water or wear.

The name "SY-CLO" on a closet guarantees that it is made under the direction and supervision of the Potteries Selling Company, of the best materials, and with the aid of the best engineering skill, and has the united endorsement of eighteen of the leading potteries of America.

Booklet on "Household Health" sent free, if you mention the name of your Plumber.

Lavatories of every design made of the same material as the SY-CLO Closets.
