

tact with water, for reasons which are not known. Such substances are known as cements. Plaster of Paris is found in nature in the form of gypsum or anhydrite, and consists of calcium sulphate and water. A granular form of gypsum is called alabaster. Calcium sulphate is difficultly soluble in hot and cold water. When heated to 100 deg. Cent. or a little above, it loses all of its water and forms the powder known as plaster of Paris, which has the power of taking up water and forming a solid substance. The hardening is a chemical process, and is caused by the combination of the water with the salt to form a crystallized variety of calcium sulphate.

(10105) H. H. M. says: Would you kindly inform me if I could get an object to float that is heavier than the water it displaces? For instance, are these large ocean steamers heavier than the water they displace? A. If a rigid body or solid be immersed in a liquid, both being at rest, the resultant action upon it of the surrounding liquid is a vertical upward force called the "buoyant effort," equal in amount to the weight of the liquid displaced, and acting through the center of gravity of the volume of displacement. From this it will be readily seen that you cannot secure an object to float which is heavier than the water it displaces. In the case of the vessel, because of the particular form of the hull, the law of displacement remains the same. The weight of the water displaced by the hull equals the entire weight of the ship and its cargo.

(10106) J. D. W. asks: Can it be proved that a right angle can be trisected? A. The trisection of a right angle is a very simple proposition. The radius of a circle is equal to the chord of 60 deg. If the radius be laid off as a chord from one extremity of the arc of a quadrant, or the arc subtending a right angle, and a radius be drawn to the other extremity of the chord, the angle formed on one side will be 60 deg. and on the other side the angle will be 30 deg. or one-third of a right angle.

(10107) A. E. N. asks: Why do steam boilers explode when, through misfortune, a steamer sinks? A. The explosion of boilers in steamers that are wrecked is probably due to the sudden stopping of the engines and the abandonment of the fireroom by the firemen without the proper precaution to check the fires. It takes but a few minutes in such cases for the steamer to overbalance the outlet of steam from the safety valves, when the rise in pressure ruptures the boilers. When one explodes, others follow by damage from the exploded boiler.

(10108) G. J. R. asks: Can you give me the reason for the vibration in a motor or generator when the armature and shaft are balanced as nearly as possible? I would like to see what your opinion is in regard to it. A. The slightest excess of weight on one side will cause a perceptible vibration of an armature. As little as one-thousandth of the total weight will cause a very considerable vibration. If an armature is perfectly balanced, it will run so quietly that it is difficult to tell whether it is in motion or not. The process of balancing an armature is described in Crocker's "Electric Lighting," Vol. I., price \$3 by mail.

(10109) C. H. W. asks in reference to the answer to query regarding the attraction of a 5-pound and 15-pound mass upon each other. The mutual attraction between the masses is given by the formula $F = \frac{m_1 m_2}{d^2}$

and to this quantity the larger mass contributes three times as much as the smaller. It is true that this attraction acts upon both masses equally, and will give to each the same quantity of motion. In the case of the earth, when a body falls toward it, the earth also falls with the same quantity of motion toward that body. But the greater portion of the motion comes from the mass of the earth, since that is enormously greater than the mass of any body falling toward it, and therefore the small body moves much farther from this attraction than the larger one does.

(10110) H. L. B. asks: 1. Would you please tell me what produces the curly effect in bird's eye maple? A. We do not know how the mechanical forces act in the growth of the wood to produce the curls in the bird's eye. A while ago the question would have been answered, "It is the nature of the tree to grow that way." 2. Why is it necessary to only put ten 16-candle-power 104-volt lamps on a circuit? A. The amount of current which is allowed to flow through one cutout in a building is regulated by the rules of the Board of Fire Underwriters and is determined by the risk of setting fire should a fuse blow.

(10111) G. H. E. writes: In an informal conversation the statement was made that of the energy stored in a given amount of coal an extremely large proportion is lost in the attempt to employ it productively, as in the steam engine, and that the utilization of the energy wasted by the present methods is an important scientific and economic problem. This statement was challenged, and in the resulting discussion the following questions arose. 1. How large a proportion of energy stored in a given amount of coal is lost by methods commonly in use? A. From 20 to 25 per cent, and sometimes more, of the heat

value of the coal is now lost. 2. At what stages in the process of transformation, and how, do the chief losses occur? A. Mostly by the heat going up the chimney, and to a small degree by bad stoking and radiation of heat from defective insulation of boiler setting and pipes. 3. What percentage of the energy in a given amount of coal can be (not is) used in producing steam? A. The possibilities for utilizing the full energy of coal are very small. Little may be expected over the best practice of to-day. It is the converting of the steam into active power wherein the trouble lies. 4. How is the amount of energy in a given amount of coal ascertained? A. The absolute amount of energy in coal is found, first by an analysis of its combustible constituents, from which the heat units are computed; second, by actual combustion of a given weight and measuring its heat producing property by absorption of the heat in water or by melting ice in a calorimeter.

(10112) J. A. M. writes: Will you kindly inform me whether the following facts are new, or only so to the writer? The mechanical equivalent of heat as given by Dr. Joule's experiment of a weight falling through air, actuating thereby wings in water, is 778 foot-pounds according to William Kent. Now you will note that the relative weights of water and air are as 1 to 774. Is there not an equation here between work, water, heat and air? Might not the slight variation of 774 and 778 pounds be due to the slip of the water? William Ripper gives the equivalent as 772 pounds. A. The mechanical equivalent of heat, which is called Joule's equivalent, as determined by Dr. Joule, was 772 foot-pounds. That is, to lift 772 pounds to a height of 1 foot requires the same amount of work as to heat 1 pound of water 1 deg. Fahr. This work was done between 1840 and 1843. Considering the advancement of mechanical science at that time it was a marvelous piece of work. He employed the friction of water and measured the heat produced. Joule also determined the equivalent by means of the electric current. Others investigated the same constant by other methods, the compression of metals, the specific heat of air, the induced electric current in metals, and the velocity of sound, with results fairly in agreement with that of Joule. Joule's method was that of direct determination of the number of foot-pounds of work used in actually heating one pound of water one degree. Other methods were indirect. That these coincided fairly well with the direct method was all that could be expected. All methods are open to errors, and more or less close approximations are all that could be attained. In 1879 Prof. Rowland took up the problem with the finest appliances of modern science. He employed water friction, as did Dr. Joule. His results were immediately accepted. Probably the work will not be done over again for a generation. Some of his results involved as many as 12,000 distinct observations. He proved that the mechanical equivalent varies with the temperature. Between 41 deg. and 68 deg. there is a change of nearly eight-tenths of one per cent in the latitude of Baltimore. The mean of Prof. Rowland's results is 778 foot-pounds, which for all ordinary purposes is at present considered the true equivalent. Prof. Rowland's experiments showed that the specific heat of water diminishes from 32 deg. to 84 deg., and then increases till the boiling point is reached. Rowland was able to produce a change of 63 deg. in the water where Joule could produce a change of only 1 deg. He also used the sensitive air thermometer instead of the slow mercurial thermometer.

(10113) An old subscriber says: I have several old daguerreotypes which until recently were in a good state of preservation. Now I find that the surface of the plate has apparently oxidized and the portrait has disappeared from view. Can you give me instructions for restoring the pictures and preserving them? A. The removal of the deposit from the surface of the daguerreotypes is such a delicate operation that, if possible, it should be entrusted to one who has had experience in that process. If, however, you wish to try it yourself, you may proceed as follows: Carefully separate the cover glass from the silver-coated plate, being especially careful that the surface of the latter is not touched even by anything so light as a feather. Soak the daguerreotype first in water, and then in a solution of potassium cyanide, from five to ten grains to the ounce; rocking the dish till the deposit is removed. A 20-grain solution of sodium hyposulphite may be used instead of the cyanide, although it is not always so successful. When the deposit has been removed, the plate should be well washed under a gentle stream from the tap, or in several changes of water, finishing with distilled water. The method of drying is important. The plate, after slight draining, should be taken by a corner by a pair of pliers and held over the flame of a spirit lamp or gas jet, allowing just sufficient heat to evaporate the remaining film of water, the evaporating of which may be assisted by gently blowing across the surface. The restored daguerreotype and cover glass, the latter after thorough cleaning, should then be bound together as before, and the more completely this is done so as to exclude the atmosphere, the longer will the image retain its pristine beauty. Potassium cyanide is a deadly poison. It should be used with care.

(10114) C. S. asks: About how much current does a 1/4-inch spark coil take to give full length of spark? A. A good authority gives about 10,000 volts as the pressure required for a spark of 1/4 inch. The current, or amperes, is insignificant. 2. Is a relay necessary in wireless telegraphy? A. Yes. 3. Is it necessary to have oscillators on the coil in wireless telegraphy? A. Yes. 4. With good usage how long should an induction coil last? A. Forever. There is no deterioration by use in an induction coil. 5. Can you explain why a Geissler tube still glows when connected with only one wire of the secondary of the coil? A. Because of electrical induction. The waves go through space from one pole of a coil to the other. The Geissler tube held between the two poles of the secondary will glow when it is connected with neither wire. The same experiment can be performed with the bulb of an incandescent lamp. Hold it in the hand by the metal base between the terminals of the coil.

(10115) R. W. W. asks: 1. The object-glass of my telescope consists of two lenses, one being convex and the other concave-convex. When they are together they are the same as an ordinary convex lens. Why is a single one not used? A. The two glasses are used to prevent the objects seen from being bordered with a colored fringe. Remove the concave glass and you will see the difference. Then study in some textbook of physics about achromatic lenses. 2. Why is it that copper wire is used for electric lighting and power currents and iron or steel for telegraph and telephone wires? A. There is a very small flow of current in the telegraph and telephone wires, and a large flow over the lighting and power circuits. Copper is a much better conductor than iron, and though it costs much more in the first place, it is far cheaper in the end. 3. What is the difference between a continuous and an alternating electric current? A. A continuous current flows like a stream of water steadily in one direction. An alternating current flows by rising to its full voltage and then falling to its least. There are alternations of the electromotive force, which has all possible values in a series.

(10116) D. P. asks: Does electricity occupy space? A. No. Electricity is not ordinary matter, as, for example, lead is. Whatever it may be, it is not a material substance.

(10117) E. O. M. writes: I have two textbooks on physics which disagree. Mr. Spottiswoode, of London, had an induction coil made which gave a 42-inch spark. One says it required 5 Grove cells to give the 42-inch spark; the other says 30 Grove cells were required. Which is right? A. The statement in Gordon's "Electricity" is that with five Grove cells the coil gave a spark 28 inches long; with 10 cells the spark was 35 inches, and with 30 cells it was 42 1/2 inches long. 2. What difference of potential was required to force the spark across the gap of 42 inches? A. We do not know. Probably hundreds of thousands of volts.

(10118) J. C. A. asks: Please inform me how to make a strong magnet of Jessop steel. I have tried to make some 1/2 inch square by 3 inches long, straight bars, by passing them through a spool of wire with a 300-volt current, by which they were strongly magnetized, but lost almost all magnetism in about three weeks. How can I make such magnets which will retain their strength for a long time? A. Heat the bars to be magnetized to a red heat and plunge them into water. They are then to be magnetized. Straight bars do not retain magnetism well. They should be in pairs with opposite poles toward each other, side by side, not end to end, or else in pairs with an iron keeper across the poles. They may be laid four in a square with opposite poles against each other. Laid down alone without keepers, the magnetism is rapidly lost.

(10119) W. F. G. asks: Will vulcanized fiber answer for the insulation on static machines, and are vulcanite and vulcanized fibers identical? A. Vulcanized fiber will be but little better than wood as an insulator in this position. Vulcanite is hard rubber and is a different substance from fiber.

(10120) E. L. asks: 1. Can you tell me, without knowing the amperage, the voltage being 50 volts, if a 75-watt dynamo or 1-6 horse power as motor will light 5 lamps of 10 candle power at full capacity? A. Ten-candle lamps may be taken to be from 3 watts to 4 watts per candle. One lamp will consume from 30 watts to 40 watts, and 75 watts will light two such lamps. 2. What is the resistance of No. 16 iron wire? A. Pure iron has a resistance of 6 times as great as copper. Ordinary telegraph wire has a resistance 15 times as great as that of copper of the same size. No. 16 copper wire has 248.81 feet per ohm. Pure iron wire of the same size would have 41.47 feet per ohm, and No. 16 ordinary iron wire would have 16.19 feet per ohm. 3. If a current of 10 amperes at 108 volts goes through 540 feet of No. 16 iron wire, what will be the electromotive force and current remaining after it has gone through, and how to calculate it? A. There will be 10 amperes remaining. But there will not be any volts remaining, if the wire constitutes the entire circuit between the mains. The same

amperes flow through the entire circuit and come out at the other end, just as the water flows through the entire length out of a pipe open at both ends and comes out at the other end. The drop of potential along a wire is proportional to its length, provided it is of uniform sectional area, as it may be presumed to be in this case. This being so, there will be a drop of one volt for each four feet along the wire. 4. Can we run a direct-current motor with an alternating current? The motor is not loaded. A. Yes; if it be started and brought up to synchronism with the current by hand, or by some other power. It will then keep step, and run by alternating current.

NEW BOOKS, ETC.

THE AMERICAN BATTLESHIP IN COMMISSION. By Thomas Beyer, U.S.N. Published by the Author. New York: Army and Navy Register. 12mo.; pp. 248.

The author of this work, Thomas Beyer, is a first-class ship fitter of the United States navy, an enlisted man who has given his views of the service. The amount of information contained in this book is certainly remarkable. The author begins with a general view of the organization of the navy, and then passes on to those subjects which laymen are most curious about. He tells, for example, how a battleship is prepared for a voyage; how it is handled at sea and in port; gives a clear picture of the daily life of the officers and men, and describes the drills of the week and their purpose. This chapter may be considered perhaps the most interesting in the book, inasmuch as it gives an enlisted man's own views of life on a man-of-war. The remaining portions of the work are devoted to chapters on the more material part of the bluejacket's life, such as the opportunities which the service offers him, his amusements and pastimes, the manufacture of ordnance and ammunition, the designing of a battleship. The last portion of the book is taken up with a collection of man-of-war yarns. The author is to be congratulated upon the praiseworthy manner in which the book has been issued. The illustrations are certainly the most interesting collection of pictures that we have ever seen. The typography is excellent. The book is one that we can heartily recommend for a good, clear, impartial account of the United States navy.

INDEX OF INVENTIONS

For which Letters Patent of the United States were Issued for the Week Ending August 21, 1906.

AND EACH BEARING THAT DATE

[See note at end of list about copies of these patents.]

Adding machine attachment, V. Stroh	829,357
Advertising device, Elmer & Remick	829,064
Advertising machine, O. M. Thomson	829,040
Air brake system, F. B. Carey	829,143
Air pressure brake, E. Kramer	828,939
Amino alcohol, preparation of, E. Fourneau	829,262
Amino alkylsters, producing, E. Fourneau	829,374
Amusement device, W. N. Haslett	829,008
Animal trap, W. C. Hooker	829,338
Annunciator, automatic car, D. H. Marshall	829,080
Awl, G. L. Holt	829,154
Axle lubricator, car, J. A. Kennedy	829,159
Base ball applying device, Armstrong & Bademan	829,051
Ballast mount, electrical, C. D. Enoch	829,373
Barrel, J. C. Parker	828,899
Bath cabinet, W. E. Menzies	829,281
Battery and bell, combined, J. A. Ny and F. Meadows	829,122
Bearing, W. L. Kayler	829,218
Bearing, rotary table, E. P. Bullard, Jr.	828,876
Bearing, spindle, W. L. Linabloom	829,165
Bearings, end thrust resisting means for, J. A. Perkins	829,085
Beater roll with ventilated knife cells, F. Flessinger	829,229
Bedclothes holder, N. C. Meek	829,118
Beer coil cleaning apparatus, C. A. Chanaler	829,367
Beet blocker and cotton chopper, W. Ferris	829,067
Beet puller, M. W. Palmer	829,285
Belt fastener, H. G. Ellis	829,146
Belt tightener, chain, J. A. Stone	829,091
Binder, F. A. Cleveland	829,322
Binder, loose leaf, S. C. Nott	829,225
Binder, loose leaf, E. A. Trussell	829,240
Binder, loose leaf, F. A. Cleveland	829,321
Blouse, S. Oppenheim	829,226
Boat, L. J. Butterfield	829,058
Boat lowering and hoisting apparatus for use on ships, life, J. Borg	829,054
Bobbin holder, S. W. Wardwell	829,306
Boiler scraper, F. Ludwig	829,024
Boiler stand, C. H. Foster	828,882
Book leaf holder, C. A. Monson	828,950
Bottle, antirefilling, O. Stegmaier	829,178
Bottle, non-refillable, B. Sharp	828,903
Bottle, non-refillable, C. Haerner	829,149
Bottle stopper, O. Del Guerra	829,145
Bottle stopper, G. Kirkegaard	829,341
Bottle, water, C. Krueger	828,891
Box, J. J. Olson	828,960
Brake shoe, A. Nelson	828,957
Brick machine, G. E. Luce	829,115
Bricks or other articles formed or constructed of clay, treating, J. Simons	829,177
Bridge, F. G. Berg	828,873
Briquet machinery, T. B. Wilcox	829,044
Briquets, preparing a mass for making, B. Wagner	829,042
Bromin substituted tannin urea derivative and making same, A. Voswinkel and R. Lauch	828,908
Brush, antiseptic shaving, A. Braunstein and A. Rattiner	829,364
Brush holder, H. M. Willis	829,047
Bucket hoisting and conveying means, two-ropes grab, A. E. Brown	829,057
Building block, J. Crampton	828,930
Buildings, lifting plate and belt for use in moving, J. C. Larsen	829,344
Buildings, tie or hanger for, H. C. Seipp	829,234
Bushing, roller, C. E. McIntire	829,223

Butter mold, N. W. Parker..... 829,287
 Button for gloves, C. R. Weidmuller..... 829,359
 Buttons, socket member of glove, C. R. Weidmuller..... 829,358
 Buttonhole fly for trousers, C. W. Bartrum..... 828,918
 Can, J. T. Ryan..... 829,036
 Can fastener, paint, J. Olson..... 829,169
 Canceling machine, A. E. Pope..... 829,230
 Canvas foot apparatus for processing, J. S. Hughes..... 829,212
 Car coupling, A. Meritz..... 829,347
 Car coupling, W. J. Burran..... 829,366
 Car fender, W. Pickett..... 829,289
 Car seat backs, adjustable arm for reversible, R. L. Mangan..... 829,078
 Car step, extension, E. S. Mitchell..... 829,280
 Car wheels, lubricating, J. S. Smith..... 829,039
 Carbureter, W. D. Lanard..... 828,940
 Carbureter, air, W. E. Garvey..... 829,345
 Carriage, shift frames, lateral lock for, C. Roderick..... 829,089
 Cement, rapid hardening of, H. Schneider..... 828,976
 Cementitious products or artificial stone, apparatus for making, W. E. Jaques..... 829,014
 Cementitious products or artificial stone, making, W. E. Jaques..... 829,012
 Cementitious products or artificial stone, manufacturing, W. E. Jaques..... 829,013
 Chafing iron, T. Galvin..... 829,005
 Chain, elastic, G. Heled..... 829,009
 Chain, drill, G. H. Hollm..... 829,153
 Churn, G. O. Powell..... 829,291
 Churn, A. P. Basham..... 829,317
 Cigar, J. Rosales..... 829,296
 Cigar cutter, J. B. Fellows..... 829,199
 Cigar cutter match server and lighter, automatic, M. J. Wozniak..... 829,048
 Cigar machine, H. Knight..... 829,019
 Circuit maker and breaker, C. J. Klein..... 829,162
 Clasp, A. Sheelock..... 829,175
 Clip, See Denturing machine clip..... 829,003
 Clutch, F. L. Clutch..... 829,140
 Clutch, W. J. Cochran..... 829,140
 Coal briquets, manufacture of, G. L. Croude..... 828,999
 Coat and similar garment, J. J. McLoughlin..... 829,029
 Cock or water faucet, drain, R. C. Greenland..... 829,069
 Cock, stop and waste, D. C. Powers..... 829,124
 Coin controlled mechanisms and the like, casing for, R. W. Geob..... 829,265
 Collar, apparatus, Draper..... 829,063
 Color changing screen, S. Herr..... 829,337
 Column clamp, J. L. Goss..... 829,260
 Comb, C. J. Smith..... 829,235
 Comb attachment, hair, U. L. Berger..... 828,872
 Combing machines, silver conductor and apron guide or wool, J. A. Reynolds..... 828,968
 Combed, A. W. Kint..... 829,160
 Composition, J. W. Hepper..... 829,155
 Concentration, J. R. Peck..... 829,031
 Concentrator, E. Peters, G. E. Bauder and A. D. Campbell..... 828,963
 Concrete articles, making ornaments mold, G. H. Bartlett..... 829,249
 Concrete block machine, D. J. Ames..... 828,994
 Concrete building block, D. J. Ames..... 828,993
 Concrete column and the like, R. A. Cummings..... 828,931
 Concrete constructing machine, A. A. Pauly..... 829,227
 Concrete construction, A. A. Pauly..... 829,225
 Concrete walls, construction of, D. Ewart Confection machine, R. W. H. Crab..... 829,097
 Coop, chicken, J. W. Stevens..... 828,965
 Copying machine, J. W. Stevens..... 829,246
 Corn-sheller feeder, J. Tanner..... 828,181
 Cotton chopper, N. Mabry..... 828,944
 Counterbalancing device, E. P. Bullard, Jr..... 828,875
 Cradle-rocking attachment, B. Sarrett..... 829,354
 Crucibles, protecting, E. A. McDonald..... 828,954
 Cuff holder, J. M. Lucas..... 828,942
 Culvert, Barton & Wiberg..... 828,917
 Cuspidor, adjustable sick-bed, W. B. Campbell..... 829,059
 Cut-out, F. T. Wheeler..... 829,043
 Cutter, See Cigar cutter..... 829,172
 Dam, adjustable, F. Pekony..... 828,911
 Damper-operating device, E. H. Weaver..... 829,119
 Dental plugger, F. X. Mellen..... 829,119
 Desk, folding drawer, A. G. Hough..... 829,156
 Display device, P. R. Clare..... 828,926
 Display envelop, J. Ward..... 828,989
 Display rack, G. H. North et al..... 829,224
 Distillation apparatus, automatic and continuous film, F. J. Clemenger..... 829,258
 Diving apparatus, F. Knopf..... 829,274
 Door, F. W. Newman..... 829,083
 Door holder, W. M. Taylor..... 829,183
 Door lock, sliding, L. N. Sweet..... 829,180
 Door opening and closing device, H. C. Bundy..... 829,365
 Door operating device, bulkhead, G. C. Ralston..... 829,352
 Dough apparatus, P. D. Harton..... 829,270
 Downdraft furnace, H. F. Norwood..... 828,898
 Drier, Moore & Thomas..... 829,028
 Drying and stretching frame, Allen & Hanna..... 828,915
 Drying machine, continuous roller, B. Cohen..... 829,141
 Drilling machine, portable electric, J. Maclean..... 828,945
 Drum, heating, V. J. Jirak..... 828,937
 Edge finishing machine, L. Onderdonk..... 829,350
 Egg peacher, S. Leach..... 829,020
 Electric brake, C. G. Hardie..... 829,334
 Electric brake, automatic, A. L. Duwelius..... 828,879
 Electric heater, A. H. Carlson..... 829,318
 Electric machine, W. A. Johnson..... 829,015
 Electric motor, M. W. Day..... 829,144
 Electric motor starting device, M. Kallmann..... 829,340
 Elevator brake, A. Sundh..... 828,983
 Elevator safety device, C. E. Brown..... 829,094
 Engine, See Gas engine..... 829,201
 Engine or motor, L. Goddu..... 829,201
 Engines, cylinder head for, A. Russell..... 829,233
 Eraser protector, rubber, W. N. Crisp..... 829,327
 Eresion meter, H. Maxim..... 829,117
 Excavating machine, A. C. Jacobs..... 829,214
 Explosive, W. Barthelmy..... 829,362
 Eyeglass and spectacle mounting, E. J. George..... 829,264
 Eyeglass guard, C. H. Carnes..... 828,924
 Eyeglass mounting, G. W. Wells..... 828,913
 Eyeglasses and spectacles, G. A. Griffin..... 829,268
 Fabric, See Pile fabric..... 829,319
 Fan, electric, H. D. Cessna..... 829,150
 Fence post, J. F. Haffey..... 829,372
 Fence post, G. Eichhorn..... 828,901
 Fence, woven wire, H. C. Pratt..... 829,079
 Fender, See Car fender..... 828,974
 File, paper and document, G. E. Schmiidmer..... 829,021
 Filter table, F. B. Leopold..... 829,113
 Filters, washtrough for, F. B. Leopold..... 828,925

BRENNAN MOTOR CO., Syracuse, N. Y.
 GENTLEMEN:—The 20 H. P. Motor I bought of you three years ago to run my ice harvester, is a dandy. It is simple, easy to control and cheap as to fuel. I did my threshing with it, running a large separator, with blower for stacking, and it seemed to run with as much power, if not more, than the large steam engine. Crowds of people came to see the little thing run such a large machine and do the work so easily. It took about three hours to thresh over 100 bushels of grain and we did not stop once. Any one wanting a motor will make no mistake if they get a Brennan.
 Years very truly,
 J. B. HAUSE.

THE "LEADER."
 H. P. Gasoline Auto-Marine Engine
 Built like a watch. Beautifully Finished. Accurately Constructed. Light, Strong, Reliable, and Noiseless in operation. Suitable for launches from 15 to 18 feet in length. Price complete, \$75 net, no discount. Thoroughly guaranteed. Perfect Speed Control. Complete descriptive Catalogue upon application. Manufactured by
 CLAUDE SINTZ,
 292 S. Front St., Grand Rapids, Mich.

FOR GUNSMITHS, TOOL MAKERS, EXPERIMENTAL & REPAIR WORK, ETC.
 From 9-in. to 18-in. swing. Arranged for Steam or Foot Power. Velocipede or Stand-up Treadle.
 Send for Lathe Catalogue.
 W. F. & JNO. BARNES CO.
 Established 1872.
 1999 Ruby St., Rockford, Ill.

How To Increase Your Business
 READ carefully, every week, the Business and Personal Wants column in the Scientific American
 This week it will be found on page 161.
 Some week you will be likely to find an inquiry for something that you manufacture or deal in. A prompt reply may bring an order.
 Watch it Carefully

A. B. C. Automobiles
 Easy to Buy \$300 No Valves, No Springs
 Easy to Operate No Gears, No Cams
 Easy to Keep No Tires to Puncture
 Simplest and most durable Automobile ever made. Built like a buggy for any country or city road. Any speed up to 20 miles per hour forward and the reverse. Write at once for particulars.
 Auto Buggy Mfg. Co., 4390 Olive St., St. Louis

STEAM TURBINES. — THEIR CONSTRUCTION, Operation and Commercial Application.
 SCIENTIFIC AMERICAN SUPPLEMENTS 1306, 1307, 1308, 1422, 1400, 1447, 1370, 1372. The articles have all been prepared by experts in steam engineering. Price 10 cents each, by mail, Munn & Co., 361 Broadway, New York City, and all newsdealers.

It's Easy to Keep Cool!
 The simplest, smallest, safest, neatest and most successful Motor Fan made is the Rawlings Patent High-Speed Water Motor Fan. Can be installed in a few minutes. No operating experts in steam engineering. Price 10 cents each, by mail, Munn & Co., 361 Broadway, New York City, and all newsdealers.

CURTISS AIRSHIP MOTORS
 7 H. P., 50 Pounds.
 All extras ready to install. Now used by every successful aeronaut. Highest Award at Lewis & Clark Exposition. World's Record, Ormond Beach, Fla.
 Send for Catalogue B.

"TIRED!"

**THEN
DRINK
Coca-Cola**

IT RELIEVES EXHAUSTION

When the BRAIN is running under full pressure send down to the FOUNTAIN for a glass of

Coca-Cola

You will be surprised how quickly it will ease the Tired Brain—soothe the Rattled Nerves and restore Wasted Energy to both Mind and Body.

It enables the entire system to readily cope with the strain of any excessive demands made upon it.

**AT ALL FOUNTAINS

Inexpensive Classified Advertisements

Advertising in this column is 50 cents a line. No less than four nor more than ten lines accepted. Count seven words to the line. All orders must be accompanied by a remittance. Further information sent on request.

SALE AND EXCHANGE.

FOR SALE.—Patents and all right on slot machine Exerciser and other new slot machine patents. For further particulars address R. H. Hartley, 405 Fourth Avenue, Pittsburg, Pa.

FOR SALE.—The George A. Seaman pipe and hose coupling patent and all for sale. For further particulars address George A. Seaman, Independence, Colo.

FOR SALE.—My patent No. 823,986 cream remover, or would take partner for developing same. This is a money-maker. For further particulars, E. S. Bartram, Selma, Ala.

FOR SALE.—The American Patent Right complete. No. 616563. "Aluminum Casks" for use as lining to brewers' ordinary beer casks. Full particulars W. R. Taylor, Medway Works, Rochester, Kent, England.

AUTOMOBILE FOR SALE AT A BARGAIN.—A Knox double opposed cylinder touring car, 1906 Model, roomy and comfortable, powerful hill climber, never out of order, has elegant top, glass front, and full equipment, and used only a short while. The reputation of the Knox cars is too well known to need more description; the magnificent score of their car in the Golden Tour speaks for itself. Address Automobile Bargain, Box 773, New York.

POULTRY PAPER, 44 pages, illustrated, 25c. per year, 4 months, 10c; sample free; 64-page practical poultry book free to yearly subscribers; book alone, 10c; catalogue poultry books free. Poultry Advocate, Syracuse, N. Y.

IF YOU WANT to buy a machine, engine, boiler, power equipment, electrical, steam, pneumatic or other machinery—anything in the machine line—Well Us and we will see that you get full descriptions, prices, catalogs, etc., from all the first-class manufacturers. We charge nothing for the service. Address Modern Machinery Daily News, Security Building, Suite 10, Chicago.

MANLOVE AUTOMATIC DRIVEWAY GATE.—Always in order; operated by any wheel. Safe, handsome, valuable. 10,000 working. (Canadian rights for sale.) Manlove Gate Co., 273 Huron Street, Chicago, Ill.

BUSINESS OPPORTUNITIES.

TO MANUFACTURERS.—Are you represented in this territory? Are results through your jobber or agent in proportion to the population? (2,500,000 within 14 miles.) Are your goods being pushed? Are you manufacturing something not handled generally? I want the agency upon a commission basis of a line of goods that can be sold in this market; have wide acquaintance with manufacturers, contractors and packers of this city and vicinity; reference and bond given. Address Box 72, Armour Station, Kansas City.

LET US BE YOUR FACTORY.—Hardware specialties manufactured under contract, models developed. We are specialists in patent articles. Prompt service, first-class workmanship, reasonable prices. America Company, Mokenca, Ill.

AUTOMOBILE EXPERTS are in constant demand at high salaries. Our seven weeks' course is the most thorough and practical, fitting men to drive, handle and repair. Day and evening classes. Special course for owners. New York School of Automobile Engineers, 146 West 56th Street, New York.

A CEMENT Machinery Manufacturer looking for first-class practical cement mixer, desires to hear from inventors having something along this line that has been developed and tested. Address Buyer, Box 773, N. Y.

STEEL WHEELS to fit any wagon or cart. Made any size, any width of tire. Also handy wagons with low wheels and wide tires. Wood wagons with steel wheels, or steel wagons with steel wheels. Log wagons and heavy traction wagons of all kinds, for horses or traction engine power. Steel axles of any size and shape. Address Electric Wheel Company, Walton Square Quincy, Ill., U. S. A.

CAPITAL TO INVEST for practical patents of interest to women. Dress, fashion, utility, etc. Only patents filed within six months of interest. Address William F. Homan, 454 Broome Street, New York.

BARGAIN for one desiring a small and well-established manufacturing business, fully protected by patents, clearing \$10,000 annually. Investigation solicited. Inquire Manufacturer, Box 773, New York.

WANTED.—Buyers for our one and two-seated business and pleasure Concord spring wagons. Send for 30-page carriage and harness catalog, free. Box 525, Kalamazoo Carriage & Harness Co., Kalamazoo, Mich.

HELP WANTED.

DEMAND for superintendents and foremen—men who can produce results—exceeds our supply. Write us to-day, stating age and experience fully. Hapgood, 305 Broadway, N. Y.

POSITION WANTED.

YOUNG MAN GRADUATE of a celebrated technical school desires position where he can advance himself by hard work and attention to duties. Address Mechanical Engineering, Box 773, N. Y.

A GOOD MAN OUT OF WORK.—Anyone wanting a works superintendent is invited to answer this provided they pay \$4.00 over for mechanical executive. George F. Stillman, 117 Summit Ave., Syracuse, N. Y.

WANTED a position as a General Foreman or Superintendent. Has been successful in producing first-class work at a satisfactory cost in Gas, Gasoline, or Kerosene Engines. Twenty years' experience. Open for engagement. Address C. R., Box 773, New York.

SITUATIONS AND PROFESSIONAL OPENINGS.

EXPORT ADVERTISING SOLICITOR WANTED.—An advertising solicitor having had long experience on export business can have a valuable position with a well-known export medium on proving his ability. Address Export, Box 773, New York.

PATENTS FOR SALE.

PATENT ON ELECTRIC EXERCISER may be had on royalty by capable parties or bought outright. Should yield a fortune by advertising, and through the trade in athletic goods. For further particulars, address P. O. Drawer 468, Buffalo, N. Y.

PATENT RIGHT FOR SALE.—An air-bed curtain protection. Great invention for breathing the pure air while in the room or in bed. The best cure for weak affected lungs. Franz Wild, Professor of Nature Cure 152 Market Street, La Crosse, Wis.

SENSITIVE LABORATORY BALANCE

By N. Monroe Hopkins. This "built-up" laboratory balance will weigh up to one pound and will turn with a quarter of a postage stamp. The balance can be made by any amateur skilled in the use of tools, and it will work as well as a \$125 balance. The article is accompanied by detailed working drawings showing various stages of the work. This article is contained in SCIENTIFIC AMERICAN SUPPLEMENT, No. 1184. Price 10 cents. For sale by MUNN & CO., 361 Broadway, New York City, or any bookseller or newsdealer.

Hammer the Hammer
Accidental Discharge Impossible

Every owner of an Iver-Johnson has a double feeling of safety—safety as to protection of life and property, and absolute safety as to accidental discharge; for there is but one way to discharge the

IVER JOHNSON SAFETY AUTOMATIC REVOLVER

and that is to pull the trigger. In addition to the safety features of the Iver Johnson is the knowledge of absolute reliability and accuracy and dependable quality.

Iver Johnson Safety Hammer Revolver
3-inch barrel, nickel-plated finish, 22 rim fire cartridge, 32-38 center fire cartridge \$5.00

Iver Johnson Safety Hammerless Revolver
3-in. bbl., nickel-plated finish, 32-38 center fire cartridge \$6.00

Sold by Hardware and Sporting Goods dealers everywhere, or will be sent prepaid on receipt of price if your dealer will not supply.

Look for the Owl's Head trademark on the grip

Send for Our Booklet, "Shots"

full of firearm lore gives important facts every owner of firearms should know; goes into details and illustrates by sectional views the peculiar construction of the Iver Johnson.
